

Trusted Application Programming Reference on Portable TEE

The National Institute of Advanced Industrial Science and Technology

2021-12-03

1 Overview of ta-ref	1
1.1 Features	1
1.1.1 What we did on RISC-V	1
1.1.2 Separate GP TEE Internal API	2
1.2 Diagram	3
1.2.1 Dependency of category	3
2 API comparison with full set of GP API	4
2.1 GP API	4
3 How to Program on ta-ref	6
3.1 Time Functions	6
3.2 Random Functions	6
3.3 Hash Functions	6
3.4 Symmetric Crypto Functions	7
3.5 Symmetric Crypto AES-GCM Functions	8
3.6 Asymmetric Crypto Functions	10
3.7 Open, Read, Write, Close On Secure Storage	11
4 Preparation before building ta-ref	12
4.1 Keystone(RISC-V Unleashed)	12
4.1.1 Required Packages	12
4.1.2 Build Keystone	12
4.1.3 Run Keystone examples	13
4.2 OP-TEE (ARM64 Raspberry Pi 3 Model B)	13
4.2.1 Required Packages	13
4.2.2 Build OP-TEE v3.9.0	13
4.2.3 Run OP-TEE Examples	15
4.3 SGX (Intel NUC)	15
4.3.1 List of machines which are confirmed to work	16
4.3.2 BIOS Versions which are failed or succeeded in IAS Test	16
4.3.3 BIOS Settings	16
4.3.4 Required Packages	16
4.3.5 Build SGX	16
4.3.6 Run sgx-ra-sample	18
4.4 Investigation of MbedTLS Configuration file	21
4.4.1 mbedtls configuration file (config.h)	21
4.4.2 Supplement Investigation information	22
5 Building	22
5.1 Install Doxygen-1.9.2	22
5.2 Install Required Packages	22
5.3 Build and Install	23
5.4 ta-ref with Keystone	23

5.4.1 Cloning source and building	23
5.4.2 Check ta-ref by running test_gp, test_hello, on QEMU	24
5.5 ta-ref with OP-TEE	25
5.5.1 Cloning source and building	26
5.5.2 Check ta-ref by running test_gp, test_hello, on QEMU	26
5.6 ta-ref with SGX	27
5.6.1 Cloning source and building	27
5.6.2 Check ta-ref by running test_gp, test_hello, simulation mode on any pc	28
6 Running on Development Boards	29
6.1 Keystone, Unleashed	29
6.1.1 Preparation of rootfs on SD Card	29
6.1.2 Copying binaries of test_hello and test_gp	31
6.1.3 Check test_hello and test_gp on Unleashed	31
6.2 OP-TEE, RPI3	33
6.2.1 Preparation of rootfs on SD Card	33
6.2.2 Copying binaries of test_hello and test_gp to rootfs partition	34
6.2.3 Check test_hello and test_gp	34
6.3 SGX, NUC	35
6.3.1 Copying binaries of test_hello and test_gp to NUC machine	35
6.3.2 Check test_hello and test_gp	35

1 Overview of ta-ref

1.1 Features

1.1.1 What we did on RISC-V

- We designed the GP internal API library to be portable.

- Keystone SDK is utilized because of runtime "Eyrie".
- The library is ported to Intel SGX as well as RISC-V Keystone.
- Implementation Challenge
 - The combination of GP internal API and cipher suite is big.
 - * We pick up some important GP internal APIs.
 - Some APIs depend on CPU architecture.
 - * We separate APIs into CPU architecture dependent / independent.
 - Integrate GP TEE Internal API to Keystone SDK.
 - * Keystone SDK includes EDL (Enclave Definition Language) named "keedger".
 - * Keedger creates the code for OCALL (request from TEE to REE) to check the pointer and boundary.

1.1.2 Separate GP TEE Internal API

- CPU architecture dependent
 - Random Generator, Time, Secure Storage, Transient Object(TEE_GenerateKey)
- CPU architecture independent(Crypto)
 - Transient Object(exclude TEE_GenerateKey), Crypto Common, Authenticated Encryption, Symmetric/Asymmetric Cipher, Message Digest

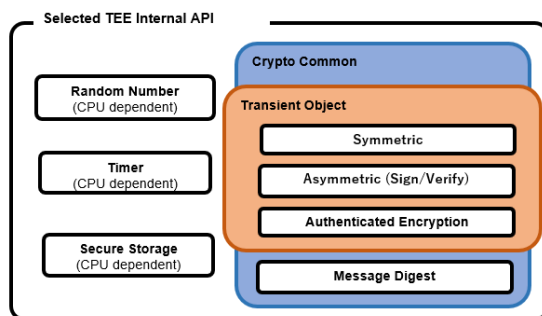

Category	CPU (In)Dependent	Functions
Random Number	Dependent	TEE_GenerateRandom
Time	Dependent	TEE_GetREETime, TEE_GetSystemTime
Secure Storage	Dependent	TEE_CreatePersistentObject, TEE_OpenPersistentObject, TEE_ReadObjectData, TEE_WriteObjectData, TEE_CloseObject
Transient Object	Dependent Independent	TEE_GenerateKey, TEE_AllocateTransientObject, TEE_FreeTransientObject, TEE_InitRefAttribute, TEE_InitValueAttribute, TEE_SetOperationKey
Crypto Common	Independent	TEE_AllocateOperation, TEE_FreeOperation
Authenticated Encryption	Independent	TEE_AEInit, TEE_AEUpdateAAD, TEE_AEUpdate, TEE_AEEncryptFinal, TEE_AEDecryptFinal
Symmetric Cipher	Independent	TEE_CipherInit, TEE_CipherUpdate, TEE_CipherDoFinal
Asymmetric Cipher	Independent	TEE_AsymmetricSignDigest, TEE_AsymmetricVerifyDigest
Message Digest	Independent	TEE_DigestUpdate, TEE_DigestDoFinal

1.2 Diagram

1.2.1 Dependency of category

Dependency of category

- Some categories have dependency.
 - Crypto Common
 - Cipher suite must be registered before use.
 - Transient Object
 - The space for a key must be prepared before use.

Sample Program

```
// Allocate a transient object for keypair
TEE_AllocateTransientObject(TEE_TYPE_ECDSA_KEYPAIR,
    KEY_SIZE, &keypair);
// Assemble an attribute for ecc key
TEE_InitValueAttribute(&attr, TEE_ATTR_ECC_CURVE,
    TEE_ECC_CURVE_NIST_P256, KEY_SIZE);
// Generate a keypair having that attribute
TEE_GenerateKey(keypair, KEY_SIZE, &attr, 1);
```

```
// Allocate sign operation
TEE_AllocateOperation(&handle, TEE_ALG_ECDSA_P256,
    TEE_MODE_SIGN, KEY_SIZE);
```

```
// Set the generated key to the sign operation
TEE_SetOperationKey(handle, keypair);
```

```
// Sign
uint32_t siglen = SIG_LENGTH;
TEE_AsymmetricSignDigest(handle, NULL, 0, hash,
    hashlen, sig, &siglen);
```

```
// Free handle for the sign operation
TEE_FreeOperation(handle);
```

Crypto Common
 Transient Object
 Asymmetric (Sign/Verify)

2 API comparison with full set of GP API

2.1 GP API

API Functions by Category

APIs supported by both GP and AIST-GP are in Blue

API list from TEE Internal Core API Specification documentation, GlobalPlatform Technology

Asymmetric	TEE_FreeOperation

3 How to Program on ta-ref

3.1 Time Functions

This function retrieves the current time as seen from the point of view of the REE, which expressed in the number of seconds and prints the "GP REE second and millisecond".

```
--- start Ree time ---
void gp_ree.time.test(void)
{
    TEE_Time time;

    /* REE time */
    TEE_GetREETime(&time);

    tee_printf("@GP REE time %u sec %u millis\n", time.seconds, time.millis);
}
--- end Ree Time ---
```

This function retrieves the current system time as seen from the point of view of the TA, which expressed in the number of seconds and print the "GP System time second and millisecond".

```
--- start System time ---
void gp_trusted.time.test(void)
{
    TEE_Time time;

    /* System time */
    TEE_GetSystemTime(&time);

    tee_printf("@GP System time %u sec %u millis\n", time.seconds, time.millis);
}
--- end System time ---
```

3.2 Random Functions

This function generates the random data by invoking TEE_GenerateRandom function and it prints the generated random data.

```
--- start Random ---
void gp_random.test(void)
{
    unsigned char rbuf[16];

    // Generate Random
    TEE_GenerateRandom(rbuf, sizeof(rbuf));

    tee_printf("@random: ");
    for (int i = 0; i < sizeof(rbuf); i++) {
        tee_printf ("%02x", rbuf[i]);
    }
    tee_printf("\n");
}
--- end Random ---
```

3.3 Hash Functions

Pseudo code of how to use Message Digest Functions. Keystone uses sha3.c which is almost identical. The function performs many operations to achieve message data hash techniques to allocate the handle for a new cryptographic operation. And then finalize the message digest operation to produce the message hash. It prints the hash message.

```

--- start Message Digest ---
void gpmessage.digest_test(void)
{
    static unsigned char data[256] = {
        #include "test.dat"
    };
    unsigned char hash[SHA_LENGTH];
    uint32_t hashlen = SHA_LENGTH;
    TEE_OperationHandle handle;
    TEE_Result rv;

    // Take hash of test data
    /* sha3_init() in sha3.c */
    rv = TEE_AllocateOperation(&handle, TEE_ALG_SHA256, TEE_MODE_DIGEST, SHA_LENGTH);
    GP_ASSERT(rv, "TEE_AllocateOperation fails");

    /* sha3_update() in sha3.c */
    TEE_DigestUpdate(handle, data, sizeof(data));

    /* sha3_final() in sha3.c */
    rv = TEE_DigestDoFinal(handle, NULL, 0, hash, &hashlen);
    GP_ASSERT(rv, "TEE_DigestDoFinal fails");

    TEE_FreeOperation(handle);
    /* hash value is ready */
    // Dump hashed data
    tee_printf("hash: ");
    for (int i = 0; i < hashlen; i++) {
        tee_printf ("%02x", hash[i]);
    }
    tee_printf("\n");
}
--- end Message Digest ---

```

3.4 Symmetric Crypto Functions

Crypto, Authenticated Encryption with Symmetric Key Verification Functions. This function allocates an uninitialized transient object, i.e. a container for attributes. Transient objects are used to hold a cryptographic object (key or key-pair). With the generation of a key, a new cryptographic operation for encrypt and decrypt data is initiated with a symmetric cipher operation. The original data is compared with decrypted data by checking the data and its length.

```

--- start Symmetric Key Encryption ---
void gp.symmetric.key.enc.verify_test(void)
{
    TEE_OperationHandle handle;

    static unsigned char data[CIPHER_LENGTH] = {
        // 0x00, 0x01, ..., 0xff
        #include "test.dat"
    };
    uint8_t iv[16];
    unsigned char out[CIPHER_LENGTH];
    uint32_t outlen;

    TEE_ObjectHandle key;
    TEE_Result rv;

    // Generate key
    rv = TEE_AllocateTransientObject(TEE_TYPE_AES, 32*8, &key);
    GP_ASSERT(rv, "TEE_AllocateTransientObject fails");

    rv = TEE_GenerateKey(key, 256, NULL, 0);
    GP_ASSERT(rv, "TEE_GenerateKey fails");

    // Encrypt test data
    rv = TEE_AllocateOperation(&handle, TEE_ALG_AES_CBC_NOPAD, TEE_MODE_ENCRYPT, 256);
    GP_ASSERT(rv, "TEE_AllocateOperation fails");

    rv = TEE_SetOperationKey(handle, key);
    GP_ASSERT(rv, "TEE_SetOperationKey fails");

    TEE_GenerateRandom(iv, sizeof(iv));
    TEE_CipherInit(handle, iv, sizeof(iv));
    //GP_ASSERT(rv, "TEE_AEInit fails");

    outlen = CIPHER_LENGTH;
    rv = TEE_CipherUpdate(handle, data, CIPHER_LENGTH, out, &outlen);
    GP_ASSERT(rv, "TEE_CipherUpdate fails");
}

```

```

    TEE_FreeOperation(handle);

    // Dump encrypted data
    tee_printf("@cipher: ");
    for (int i = 0; i < CIPHER_LENGTH; i++) {
        tee_printf ("%02x", out[i]);
    }
    tee_printf("\n");

    // Decrypt it
    rv = TEE_AllocateOperation(&handle, TEE_ALG_AES_CBC_NOPAD, TEE_MODE_DECRYPT, 256);
    GP_ASSERT(rv, "TEE.AllocateOperation fails");

    rv = TEE_SetOperationKey(handle, key);
    GP_ASSERT(rv, "TEE.SetOperationKey fails");

    TEE_CipherInit(handle, iv, sizeof(iv));
    //GP_ASSERT(rv, "TEE.AEInit fails");

    outlen = CIPHER_LENGTH;
    rv = TEE_CipherUpdate(handle, out, CIPHER_LENGTH, out, &outlen);
    GP_ASSERT(rv, "TEE.CipherUpdate fails");

    TEE_FreeOperation(handle);
    TEE_FreeTransientObject(key);

    // Dump data
    tee_printf("decrypted to: ");
    for (int i = 0; i < CIPHER_LENGTH; i++) {
        tee_printf ("%02x", out[i]);
    }
    tee_printf("\n");

    // Verify decrypted data against original one
    int verify_ok;
    verify_ok = !memcmp(out, data, CIPHER_LENGTH);
    if (verify_ok) {
        tee_printf("verify ok\n");
    } else {
        tee_printf("verify fails\n");
    }
}
--- end Symmetric Key Encryption ---

```

3.5 Symmetric Crypto AES-GCM Functions

This function encrypt and decrypt the test data. The function allocates an uninitialized transient object, i.e. a container for attributes. Transient objects are used to hold a cryptographic object (key or key-pair). With the generation of a key, a new cryptographic operation for encrypt and decrypt data is initiated with a symmetric cipher operation. The data is also checked whether it is completely encrypted or decrypted. The original data is compared with decrypted data by checking the data and cipher length.

```

--- start Symmetric Key GCM ---
void gp_symmetric_key_gcm_verify_test(void)
{
    TEE_OperationHandle handle;

    static unsigned char data[CIPHER_LENGTH] = {
        // 0x00, 0x01, ..., 0xff
        #include "test.dat"
    };

    uint8_t iv[16];
    unsigned char out[CIPHER_LENGTH];
    uint32_t outlen;
    unsigned char tag[16];

    TEE_ObjectHandle key;
    TEE_Result rv;

    // Generate key
    rv = TEE_AllocateTransientObject(TEE_TYPE_AES, 256, &key);
    GP_ASSERT(rv, "TEE.AllocateTransientObject fails");

    rv = TEE_GenerateKey(key, 256, NULL, 0);
    GP_ASSERT(rv, "TEE.GenerateKey fails");

```

```

// Encrypt test data
rv = TEE_AllocateOperation(&handle, TEE_ALG_AES_GCM, TEE_MODE_ENCRYPT, 256);
GP_ASSERT(rv, "TEE_AllocateOperation fails");

rv = TEE_SetOperationKey(handle, key);
GP_ASSERT(rv, "TEE_SetOperationKey fails");

TEE_GenerateRandom(iv, sizeof(iv));

/* Equivalent in openssl is EVP_EncryptInit_ex() */
rv = TEE_AEInit(handle, iv, sizeof(iv), 16*8, 16, 16);
GP_ASSERT(rv, "TEE_AEInit fails");

/* Equivalent in openssl is EVP_EncryptUpdate() */
// rv = TEE_AEUpdateAAD(handle, aad, 16);
// GP_ASSERT(rv, "TEE_AEUpdateAAD fails");

unsigned int taglen = 16;
memset(tag, 0, 16);

outlen = CIPHER_LENGTH;

/* Equivalent in openssl is EVP_EncryptFinal() */

    tee_printf("verify fails\n");
}
}
--- end Symmetric Key GCM ---

```

3.6 Asymmetric Crypto Functions

Crypto, Sign and Verify with Asymmetric Key Verification Functions. Cryptographic Operations for API Message Digest Functions. The function performs cryptographic operation for API Message. To achieve this, the function allocates a handle for a new cryptographic operation, to finalize the message digest operation and to produce the message hash. The Hashed data is signed with signature key within an asymmetric operation. The original Hashed Data and Signed hashed data is compared for ok status.

```

--- start Asymmetric Key Signed ---
void gp_asymmetric_key_sign_test(void)
{
    static unsigned char data[256] = {
        // 0x00, 0x01, ..., 0xff
        #include "test.dat"
    };
    unsigned char hash[SHA_LENGTH];
    unsigned char sig[SIG_LENGTH];
    uint32_t hashlen = SHA_LENGTH;
    TEE_OperationHandle handle;
    TEE_Result rv;

    // Take hash of test data
    /* Calculate hash */
    /* sha3_init() in sha3.c */
    rv = TEE_AllocateOperation(&handle, TEE_ALG_SHA256, TEE_MODE_DIGEST, SHA_LENGTH);
    GP_ASSERT(rv, "TEE_AllocateOperation fails");

    /* sha3_update() in sha3.c */
    TEE_DigestUpdate(handle, data, sizeof(data));

    /* sha3_final() in sha3.c */
    rv = TEE_DigestDoFinal(handle, NULL, 0, hash, &hashlen);
    GP_ASSERT(rv, "TEE_DigestDoFinal fails");

    /* free up */
    TEE_FreeOperation(handle);
    /* Get the signature */

    // Dump hashed data
    tee_printf("@digest: ");
    for (int i = 0; i < SHA_LENGTH; i++) {
        tee_printf("%02x", hash[i]);
    }
    tee_printf("\n");

    uint32_t siglen = SIG_LENGTH;
    TEE_ObjectHandle keypair;

    // Sign hashed data with the generated keys
    /* set ecdsa_p256 key */
    rv = TEE_AllocateOperation(&handle, TEE_ALG_ECDSA_P256, TEE_MODE_SIGN, 256);
    GP_ASSERT(rv, "TEE_AllocateOperation fails");

    // Generate keypair
    rv = TEE_AllocateTransientObject(TEE_TYPE_ECDSA_KEYPAIR, 256, &keypair);
    GP_ASSERT(rv, "TEE_AllocateTransientObject fails");

    TEE_Attribute attr;
    TEE_InitValueAttribute(&attr,
        TEE_ATTR_ECC_CURVE,
        TEE_ECC_CURVE_NIST_P256,
        256);
    rv = TEE_GenerateKey(keypair, 256, &attr, 1);

TEE_FreeTransientObject(keypair);

if (verify_ok == TEE_SUCCESS) {
    tee_printf("verify ok\n");
} else {
    tee_printf("verify fails\n");
}
}
/* Check verify_ok for success of verification */
--- end Asymmetric Key Signed ---

```

3.7 Open, Read, Write, Close On Secure Storage

Core Functions, Secure Storage Functions. Pseudo code of how to use Secure Storage. These could be implemented using ocall on Keystone. Almost identical to open(), clone(), read(), write() in POSIX API. The function creates a persistent object for reading and writing the data. The created data individually for read and write are compared for data length. If the length of both the objects are same, the function prints "verify ok" and prints "verify fails" if it is not the same.

```

--- start Secure storage ---
void gp_secure_storage_test(void)
{
    static unsigned char data[] = {
        // 0x00,0x01,...,0xff
        #include "test.dat"
    };
    static unsigned char buf[DATA_LENGTH];

    TEE_Result rv;

    /* write */
    TEE_ObjectHandle object;
    rv = TEE_CreatePersistentObject(TEE_STORAGE_PRIVATE,
        "FileOne", strlen("FileOne"),
        (TEE_DATA_FLAG_ACCESS_WRITE
         | TEE_DATA_FLAG_OVERWRITE),
        TEE_HANDLE_NULL,
        NULL, 0,
        &object);
    GP_ASSERT(rv, "TEE.CreatePersistentObject fails");

    memcpy(buf, data, DATA_LENGTH);

    /* fill the date in buffer */
    rv = TEE_WriteObjectData(object, (const char *)data, DATA_LENGTH);
    GP_ASSERT(rv, "TEE.WriteObjectData fails");

    TEE_CloseObject(object);
    --- write file end ---

    /* clear buf */
    memset(buf, 0, DATA_LENGTH);

    --- read file start ---
    /* read */
    rv = TEE_OpenPersistentObject(TEE_STORAGE_PRIVATE,
        "FileOne", strlen("FileOne"),
        TEE_DATA_FLAG_ACCESS_READ,
        &object);
    GP_ASSERT(rv, "TEE.OpenPersistentObject fails");
}

```

```

uint32_t count;
rv = TEE_ReadObjectData(object, (char *)buf, DATA_LENGTH, &count);

GP_ASSERT(rv, "TEE.ReadObjectData fails");
TEE_CloseObject(object);

/* use the data in buffer */
tee_printf("%d bytes read: ", count);
for (uint32_t i = 0; i < count; i++) {
    tee_printf ("%02x", buf[i]);
}
tee_printf("\n");

/* Compare read data with written data */
int verify_ok;
verify_ok = !memcmp(buf, data, DATA_LENGTH);
if (verify_ok) {
    tee_printf("verify ok\n");
} else {
    tee_printf("verify fails\n");
}
}
--- end Secure storage ---

```

4 Preparation before building ta-ref

4.1 Keystone(RISC-V Unleashed)

Keystone is an open-source TEE framework for RISC-V processors. For more details check,

- <http://docs.keystone-enclave.org/en/latest>

4.1.1 Required Packages

Install following Packages

```

$ sudo apt-get update
$ sudo apt-get install -y autoconf automake autotools-dev bc bison
build-essential curl expat libexpat1-dev flex gawk gcc git gperf libgmp-dev
libmpc-dev libmpfr-dev libtool texinfo tmux patchutils zlib1g-dev wget
bzip2 patch vim-common lbzip2 python pkg-config libglib2.0-dev libpixman-1-dev
libssl-dev screen device-tree-compiler expect make self unzip cpio rsync cmake

```

4.1.2 Build Keystone

Download the keystone sources

```

$ git clone https://github.com/keystone-enclave/keystone.git
$ cd keystone
$ git checkout v0.3
$ ./fast-setup.sh
$ make
$ source source.sh
./sdk/scripts/init.sh
./sdk/examples/hello/vault.sh
./sdk/examples/hello-native/vault.sh
./tests/tests/vault.sh
$ make image

```

RISC-V Toolchain:

- When you execute `./fast-setup.sh`, the toolchain for RISC-V has been installed at `$KEYSTONE_DIR/riscv/bin` and it adds to your `PATH`.

4.1.3 Run Keystone examples

Launch QEMU console

```
$ ./scripts/run-qemu.sh
Welcome to Buildroot
```

Login to console with user=root, passwd=sifive

```
buildroot login: root
Password:
$
```

Run hello example

```
$ insmod keystone-driver.ko
[ 365.354299] keystone_driver: loading out-of-tree module taints kernel.
[ 365.364279] keystone_enclave: keystone enclave v0.2
$ ./hello/hello.ke
Verifying archive integrity... 100% All good.
Uncompressing Keystone vault archive 100%
hello, world!
```

Poweroff the console incase, if you want to exit.

```
$ poweroff
```

4.2 OP-TEE (ARM64 Raspberry Pi 3 Model B)

OP-TEE is a Trusted Execution Environment (TEE) designed as companion to a non-secure Linux kernel running on Arm. Lets build OP-TEE for QEMU and Raspberry Pi3 Model B development board. For more details check,

- <https://optee.readthedocs.io/en/latest/>

4.2.1 Required Packages

Install following packages on Ubuntu 18.04

```
$ sudo dpkg --add-architecture i386
$ sudo apt-get update -y
$ sudo apt-get install -y android-tools-adb android-tools-fastboot autoconf \
    automake bc bison build-essential ccache cscope curl device-tree-compiler \
    expect flex ftp-upload gdisk iasl libattr1-dev libc6:i386 libcap-dev \
    libfdt-dev libftdi-dev libglib2.0-dev libhidapi-dev libncurses5-dev \
    libpixman-1-dev libssl-dev libstdc++6:i386 libtool libz1:i386 make \
    mtools netcat python python-crypto python3-crypto python-pyelftools \
    python3-pycryptodome python3-pyelftools python3-serial vim-common \
    rsync unzip uuid-dev xdg-utils xterm xz-utils zlib1g-dev \
    git python3-pip wget cpio \
    texlive texinfo \
$ sudo pip3 install pycryptodomex
```

4.2.2 Build OP-TEE v3.9.0

Configure git

```
$ git config --global user.name "dummy"
$ git config --global user.email "dummy@gmail.com"
$ git config --global color.ui false
$ mkdir ~/bin
$ curl https://storage.googleapis.com/git-repo-downloads/repo > ~/bin/repo && \
$ chmod +x ~/bin/repo
```

4.2.2.1 Download Toolchains

```
$ export TOOLCHAIN_DIR=${HOME}/toolchains
$ sudo apt-get install -y wget xz-utils
$ mkdir -p ${TOOLCHAIN_DIR}/aarch64 ${TOOLCHAIN_DIR}/aarch32
$ wget http://192.168.100.100:2000/gcc-arm-8.3-2019.03-x86_64-arm-linux-gnueabi.tar.xz -o /dev/null
  -O aarch32.tar.xz && \
  tar xf aarch32.tar.xz --strip-components=1 -C ${TOOLCHAIN_DIR}/aarch32
$ wget http://192.168.100.100:2000/gcc-arm-8.3-2019.03-x86_64-aarch64-linux-gnu.tar.xz -o /dev/null
  -O aarch64.tar.xz && \
  tar xf aarch64.tar.xz --strip-components=1 -C ${TOOLCHAIN_DIR}/aarch64
$ export PATH=${TOOLCHAIN_DIR}/aarch64/bin:${TOOLCHAIN_DIR}/aarch32/bin:${PATH}
```

4.2.2.2 Clone and Build OP-TEE v3.9.0 for QEMU

Clone optee version 3.9.0 for QEMU

```
$ mkdir optee-3.9.0.qemu
$ cd optee-3.9.0.qemu
$ ~/bin/repo init -u https://github.com/knknkn1162/manifest.git -m qemu.v8.xml -b 3.9.0
$ ~/bin/repo sync -j4 --no-clone-bundle
$ ln -s ~/toolchains toolchains
$ cd build
$ make
```

If build is successfull, the rootfs can be found as follows

```
$ ls -l ../out-br/images/rootfs.cpio.gz
```

4.2.2.3 Clone and Build OP-TEE v3.9.0 for RPI3

Copy the following lines into "optee-rpi3.sh" script

```
#!/bin/bash -u
export OPTEE_VER=3.1
export OPTEE_DIR=${PWD}/optee-${OPTEE_VER}-rpi3
mkdir ${OPTEE_DIR} || true
cd ${OPTEE_DIR}
~/bin/repo init -u https://github.com/knknkn1162/manifest.git -m rpi3.xml -b ${OPTEE_VER}
~/bin/repo sync -j4 --no-clone-bundle
ln -s ~/toolchains ${OPTEE_DIR}/. || true
echo 'CONFIG_CMDLINE="console=ttyAMA0,115200 kgdboc=ttyAMA0,115200 root=/dev/mmcblk0p2
rootfstype=ext4 noinitrd rw rootwait init=/lib/systemd/systemd"' > build/defconfig-cmdline.txt
cd build
make OPTEE_CLIENT_BIN_ARCH_EXCLUDE=/boot
LINUX_DEFCONFIG_COMMON_FILES="${OPTEE_DIR}/linux/arch/arm64/configs/bcmrpi3_defconfig
${OPTEE_DIR}/build/kconfigs/rpi3.conf ${OPTEE_DIR}/build/defconfig-cmdline.txt"
BR2_PACKAGE_OPTEE_OS_EXT=n BR2_PACKAGE_OPTEE_TEST_EXT=n
BR2_PACKAGE_OPTEE_EXAMPLES_EXT=n BR2_TOOLCHAIN_EXTERNAL_GCC_8=y BR2_TOOLCHAIN_EXTERNAL_HEADERS_4_19=y
BR2_HOST_GCC_AT_LEAST_8=y
BR2_TOOLCHAIN_HEADERS_AT_LEAST="4.19" -j`nproc`
```

Run the script as follows

```
$ chmod +x optee-rpi3.sh
$ ./optee-rpi3.sh 3.9.0
```

If build is successfull, the rootfs can be found as follows

```
$ ls -l ../out-br/images/rootfs.cpio.gz
```

4.2.3 Run OP-TEE Examples

4.2.3.1 Launching QEMU Console

Run following commands from OP-TEE build directory

```
$ cd $OPTEE_DIR/build
$ make run
```

Once above command is success, QEMU is ready

```
* QEMU is now waiting to start the execution
* Start execution with either a 'c' followed by <enter> in the QEMU console or
* attach a debugger and continue from there.
*
* To run OP-TEE tests, use the xtest command in the 'Normal World' terminal
* Enter 'xtest -h' for help.
cd /TEE/demo/rpi3/optee.3.9.0.qemu/build/./out/bin
&& /TEE/demo/rpi3/optee.3.9.0.qemu/build/./qemu/aarch64-softmmu/qemu-system-aarch64 \
-nographic \
-serial tcp:localhost:54320 -serial tcp:localhost:54321 \
-smp 2 \
-s -S -machine virt,secure=on -cpu cortex-a57 \
-d unimp -semihosting-config enable,target=native \
-m 1057 \
-bios bl1.bin \
-initrd rootfs.cpio.gz \
-kernel Image -no-acpi \
-append 'console=ttyAMA0,38400 keep_bootcon root=/dev/vda2' \
-object rng-random,filename=/dev/urandom,id=rng0 -device virtio-rng-pci,rng=rng0,max-bytes=1024,
period=1000 -netdev user,id=vmnic -device virtio-net-device,netdev=vmnic
QEMU 3.0.93 monitor - type 'help' for more information
(qemu) c
Now Optee started to boot from another tab on the Terminal
```

4.2.3.2 Run hello world example

Once boot completed it displays following message, then enter "root" to login to the shell

```
Welcome to Buildroot, type root or test to login
buildroot login: root
$
$ optee_example.hello.world
Invoking TA to increment 42
TA incremented value to 43
```

Poweroff the console in case, if you want to exit.

```
$ poweroff
```

4.3 SGX (Intel NUC)

Intel(R) Software Guard Extensions (Intel(R) SGX) is an Intel technology for application developers who is seeking to protect selected code and data from disclosure or modification. For more details check,

- <https://github.com/intel/linux-sgx/blob/master/README.md>

4.3.1 List of machines which are confirmed to work

1. Intel NUC7PJYH - Intel(R) Celeron(R) J4005 CPU @ 2.00GHz
2. Intel NUC7PJYH - Intel(R) Pentium(R) Silver J5005 CPU @ 1.50GHz
3. Intel NUC9VXQNX - Intel(R) Xeon(R) E-2286M CPU @ 2.40GHz (Partially working)

4.3.2 BIOS Versions which are failed or succeeded in IAS Test

1. BIOS Version JYGLKCPX.86A.0050.2019.0418.1441 - IAS Test was Failed
2. BIOS Version JYGLKCPX.86A.0053.2019.1015.1510 - IAS Test was Failed
3. BIOS Version JYGLKCPX.86A.0057.2020.1020.1637 - IAS Test was Success
4. BIOS Version QNCFLX70.0034.2019.1125.1424 - IAS Test was Failed
5. BIOS Version QNCFLX70.0059.2020.1130.2122 - IAS Test was Success

Update BIOS from:

- <https://downloadcenter.intel.com/download/29987/BIOS-Update-JYGLKCPX->
- <https://downloadcenter.intel.com/download/30069/BIOS-Update-QNCFLX70->

4.3.3 BIOS Settings

1. Make sure you are running with latest version BIOS
2. Make sure you enabled SGX support in BIOS
3. Make sure Secure Boot disabled in BIOS

Refer: <https://github.com/intel/sgx-software-enable/blob/master/README.md>

4.3.4 Required Packages

Install following packages on Ubuntu 18.04

```
$ sudo apt-get install build-essential ocaml ocamlbuild automake autoconf libtool wget python  
libssl-dev git cmake perl libssl-dev libcurl4-openssl-dev protobuf-compiler libprotobuf-dev  
debhelper cmake reprepro expect unzip sshpass
```

4.3.5 Build SGX

There are 3 components which need to be build for SGX

1. linux-sgx
2. linux-sgx-driver
3. sgx-ra-sample

4.3.5.1 SGX SDK

Clone and build

```
$ git clone https://github.com/intel/linux-sgx.git -b sgx.2.10
$ cd linux-sgx
$ git checkout sgx.2.10
$ ./download.prebuilt.sh
$ sudo cp external/toolset/ubuntu18.04/{as,ld,ld.gold,objdump} /usr/local/bin/
$ make -j`nproc` sdk.install.pkg DEBUG=1
```

Install SGX SDK

```
$ sudo ./linux/installer/bin//sgx_linux_x64_sdk.${version}.bin
```

where `${version}` is a string something similar to 2.10.100.2.

Answer the question with `no` and input the install dir as `/opt/intel`

Build and Install SGX PSW packages

See here: <https://github.com/intel/linux-sgx#install-the-intelr-sgx-psw>

```
$ source /opt/intel/sgxsdk/environment
$ make deb.psw.pkg DEBUG=1
$ rm ./linux/installer/deb/*/*sgx-dcap-pccs*.deb
$ sudo dpkg -i ./linux/installer/deb/*/**.deb
```

Install SGX PSW packages from Intel Repository

See here: <https://github.com/intel/linux-sgx#install-the-intelr-sgx-psw-1>

Using the local repo is recommended, since the system will resolve the dependencies automatically.

Check at page no.7, https://download.01.org/intel-sgx/sgx-linux/2.9/docs/Intel_SGX_Installation_Guide_Linux_2.9_Open_Source.pdf

```
$ sudo apt install libsgx-enclave-common libsgx-epid libsgx-launch libsgx-urts libsgx-uae-service
libsgx-quote-ex
```

If you see below error,

```
Errors were encountered while processing:
/tmp/apt-dpkg-install-pCB0cR/04-libsgx-headers-2.12.100.3-bionic1.amd64.deb
```

Here is the fix

```
$ sudo apt -o Dpkg::Options::="--force-overwrite" --fix-broken install
```

4.3.5.2 Build and Install SGX Driver

See [linux-sgx-driver](#).

Caveat: Whenever updating kernel, don't forget rebuilding this driver with new version of the kernel header. (There are a few linux-sgx-driver-dkms repo, though I've experienced troubles with them.)

Clone and build

```
$ git clone https://github.com/intel/linux-sgx-driver.git
$ cd linux-sgx-driver
$ make
```

Install SGX driver

```
$ sudo mkdir -p "/lib/modules/"`uname -r`"/kernel/drivers/intel/sgx"
$ sudo cp isgx.ko "/lib/modules/"`uname -r`"/kernel/drivers/intel/sgx"
$ sudo sh -c "cat /etc/modules | grep -Fxq isgx || echo isgx >> /etc/modules"
$ sudo /sbin/depmod
$ sudo /sbin/modprobe isgx
```

When modprobe fails with "Operation is not permitted", disable secure boot in BIOS. So that the unsigned kernel driver can be installed. If it is success, reboot your machine and verify `sudo lsmod | grep isgx` if it shows `isgx.ko`

4.3.6 Run sgx-ra-sample

4.3.6.1 Build sgx-ra-sample Clone and build OpenSSL 1.1.c

```
$ wget https://www.openssl.org/source/openssl-1.1.1c.tar.gz
$ tar xf openssl-1.1.1c.tar.gz
$ cd openssl-1.1.1c/
$ ./config --prefix=/opt/openssl/1.1.1c --openssldir=/opt/openssl/1.1.1c
$ make
$ sudo make install
$ cd ..
```

Clone and build sgx-ra-sample

```
$ git clone https://github.com/intel/sgx-ra-sample.git
$ cd sgx-ra-sample/
$ ./bootstrap
$ ./configure --with-openssldir=/opt/openssl/1.1.1c
$ make
```

4.3.6.2 Prepare for IAS Test

1. Obtain a subscription key for the Intel SGX Attestation Service Utilizing Enhanced Privacy ID (EPID). See here: <https://api.portal.trustedservices.intel.com/EPID-attestation>
2. Download Intel_SGX_Attestation_RootCA.pem form above portal.
3. Edit settings file and update the file with your own values obtained from portal.

```

4.3.6.4 Possible wget Error

Server may invoke wget command to get some files from intel servers. If the server side fails with following error

```
Connecting to api.trustedservices.intel.com (api.trustedservices.intel.com)|40.87.90.88|:443...
connected.
ERROR: cannot verify api.trustedservices.intel.com's certificate, issued by 'CN=COMODO RSA
Organization Validation Secure Server CA,O=COMODO CA Limited,L=Salford,ST=Greater
Manchester,C=GB':
Unable to locally verify the issuer's authority.
To connect to api.trustedservices.intel.com insecurely, use '--no-check-certificate'.
```

then add a line `ca-certificate = /etc/ssl/certs/ca-certificates.crt` to `/etc/wgetrc` file as super user, then test again.

4.3.6.5 BIOS Updating

If BIOS version is outdated, IAS may not succeed. So when you are done with BIOS update, the sgx driver would be required to make and install again.

Update BIOS from:

- <https://downloadcenter.intel.com/download/29987/BIOS-Update-JYGLKCPX->
- <https://downloadcenter.intel.com/download/30069/BIOS-Update-QNCFLX70->

4.3.6.6 Run LocalAttestation

Running SDK code samples in simulation mode

```
$ source /opt/intel/sgxsdk/environment
$ cd linux-sgx/SampleCode/LocalAttestation
$ make SGX_MODE=SIM
$ cd bin
$ ./app
succeed to load enclaves.
succeed to establish secure channel.
Succeed to exchange secure message...
Succeed to close Session...
```

Running in hardware mode (It works when you have latest BIOS and SGX support is enabled in BIOS)

```
$ source /opt/intel/sgxsdk/environment
$ cd linux-sgx/SampleCode/LocalAttestation
$ make SGX_MODE=HW
$ cd bin
$ ./app
succeed to load enclaves.
succeed to establish secure channel.
Succeed to exchange secure message...
Succeed to close Session...
```

4.4 Investigation of MbedTLS Configuration file

Mbed TLS should build out-of-the box on a large variety of platforms. However, we may need to adjust a few platform-specific settings or we can customize the set of features that will be built. All this operation can be performed in a single configuration file.

4.4.1 mbedtls configuration file (config.h)

The mbedtls configuration file `config.h` has the following sections

- System Support - Select options depending on platform
- Mbed TLS feature support - Select which features you want to enable for corresponding modules
- Mbed TLS modules - Select modules to build in
- Module configuration options - Set specific options for each module

4.4.1.1 Optee mbedtls config file

Location of the config file in optee environment

`optee/mbedtls/include/mbedtls/config.h`

Have a look at the source which uses `config.h` file for reference.

Example source:

`optee/mbedtls/include/mbedtls/library/ssl_ciphersuites.c`

Some sample configurations can be found in `configs/` directory. In Optee, the contents of `configs` directory is listed below.

```
$ ls -l optee/mbedtls/configs
total 24
-rw-r--r-- 1 akirat akirat 2852 Feb 17 2021 config-ccm-psk-tls1.2.h
-rw-r--r-- 1 akirat akirat 2102 Feb 17 2021 config-mini-tls1.1.h
-rw-r--r-- 1 akirat akirat 2628 Feb 17 2021 config-no-entropy.h
-rw-r--r-- 1 akirat akirat 3573 Feb 17 2021 config-suite-b.h
-rw-r--r-- 1 akirat akirat 2680 Feb 17 2021 config-thread.h
-rw-r--r-- 1 akirat akirat 1050 Feb 17 2021 README.txt
```

4.4.1.2 ta-ref mbedtls config file

Location of the config file in ta-ref environment

`ta-ref/teep-device/libteep/mbedtls/include/mbedtls/config.h`

Have a look at the source which uses `config.h` file for reference.

Example source:

`ta-ref/teep-device/libteep/mbedtls/include/mbedtls/library/ssl_ciphersuites.c`

Some sample configurations can be found in `configs/` directory. In ta-ref, the contents of `configs` directory is listed below.

```
$ ls -l ta-ref/teep-device/libteep/mbedtls/configs
total 24
-rw-r--r-- 1 akirat akirat 2852 Feb 18 2021 config-ccm-psk-tls1.2.h
-rw-r--r-- 1 akirat akirat 2102 Feb 18 2021 config-mini-tls1.1.h
-rw-r--r-- 1 akirat akirat 2628 Feb 18 2021 config-no-entropy.h
-rw-r--r-- 1 akirat akirat 3573 Feb 18 2021 config-suite-b.h
-rw-r--r-- 1 akirat akirat 2680 Feb 18 2021 config-thread.h
-rw-r--r-- 1 akirat akirat 1050 Feb 18 2021 README.txt
```

4.4.1.3 teep-device mbetls config file

Location of the config file in teep-device environment

teep-device/libteep/mbedtls/include/mbedtls/config.h

Have a look at the source which uses config.h file for reference.

Example source:

teep-device/libteep/mbedtls/include/mbedtls/library/ssl_ciphersuites.c

Some sample configurations can be found in configs/ directory. In teep-device, the contents of configs directory is listed below.

```
$ ls -l teep-device/libteep/mbedtls/configs
total 24
-rw-r--r-- 1 akirat akirat 2852 Feb 18 2021 config-ccm-psk-tls1.2.h
-rw-r--r-- 1 akirat akirat 2102 Feb 18 2021 config-mini-tls1.1.h
-rw-r--r-- 1 akirat akirat 2628 Feb 18 2021 config-no-entropy.h
-rw-r--r-- 1 akirat akirat 3573 Feb 18 2021 config-suite-b.h
-rw-r--r-- 1 akirat akirat 2680 Feb 18 2021 config-thread.h
-rw-r--r-- 1 akirat akirat 1050 Feb 18 2021 README.txt
```

4.4.2 Supplement Investigation information

It is necessary to edit the following file to select the cryptographic algorithm when using mbedtls in optee.
optee/optee_os/lib/libmbedtls/include/mbedtls.config_kernel.h

In Optee, selection of algorithms can be made in the below file. GCM doesn't seem to be included by default.
optee/optee_os/lib/libmbedtls/include/mbedtls.config_uta.h

In ta-ref, selection of algorithms can be made in the below file. GCM is included by default.

5 Building

5.1 Install Doxygen-1.9.2

This PDF was generated using Doxygen version 1.9.2. To install doxygen-1.9.2 following procedure is necessary.

5.2 Install Required Packages

Install following packages on Ubuntu 18.04

```
$ sudo apt install doxygen-latex graphviz texlive-full texlive-latex-base latex-cjk-all
```

Above packages required to generate PDF using doxygen.

5.3 Build and Install

```
$ git clone https://github.com/doxygen/doxygen.git
$ cd doxygen
$ mkdir build
$ cd build
$ cmake -G "Unix Makefiles" ..
$ make
$ sudo make install
```

5.4 ta-ref with Keystone

Make sure Keystone and other dependant sources have been built

5.4.1 Cloning source and building

Install required packages

```
$ sudo apt-get update
$ sudo apt-get install -y clang-tools-6.0 libclang-6.0-dev cmake ocaml expect screen sshpass
```

Setup Env

```
$ export KEYSTONE_DIR=<path to your keystone directory>
$ export PATH=$PATH:$KEYSTONE_DIR/riscv/bin
```

Clone and Build KEYEDGE

```
$ GIT_SSL_NO_VERIFY=1 git clone --recursive https://192.168.100.100/rinkai/keyedge.git
$ cd keyedge
$ git checkout f9406aba2117147cc54462ede4766e26f028ced9
$ make
```

Clone and Build KEEDGER8R

```
$ GIT_SSL_NO_VERIFY=1 git clone --recursive https://192.168.100.100/rinkai/keedger8r.git
$ cd keedger8r
$ make
$ sed -i 's/MAX_EDGE_CALL 10$/MAX_EDGE_CALL 1000/' ${KEYSTONE_DIR}/sdk/lib/edge/include/edge_common.h
$ make -C ${KEYSTONE_DIR}/sdk/lib clean all
```

Clone the source

```
$ git clone https://192.168.100.100/rinkai/ta-ref.git
$ cd ta-ref
$ git checkout teep-device-tb-slim
$ git submodule sync --recursive
$ git submodule update --init --recursive
```

Build

```
$ export KEYSTONE_DIR=<path to keystone directory>
$ export KEYSTONE_SDK_DIR=$KEYSTONE_DIR/sdk
$ export KEYEDGE_DIR=<path to keyedge directory>
$ export KEEDGER8R_DIR=<path to keedger8r directory>
$ source env/keystone.sh
$ make build test-bin MACHINE=HIFIVE TEST_DIR=test.hello
$ make build test-bin MACHINE=HIFIVE TEST_DIR=test_gp
```

5.4.2 Check ta-ref by running test_gp, test.hello, on QEMU

Copy the test.hello and test_gp programs to QEMU.

5.4.2.1 Launch QEMU Console

```
$ cd $KEYSTONE_DIR
$ ./scripts/run-qemu.sh
Welcome to Buildroot
```

5.4.2.2 test.hello

Run test.hello

```
$ cp test.hello/keystone/Enclave/Enclave.eapp.riscv $KEYSTONE_DIR/buildroot.overlay/root/test.hello/
$ cp test.hello/keystone/Enclave/App.client $KEYSTONE_DIR/buildroot.overlay/root/test.hello/
$ cp $KEYSTONE_SDK_DIR/rts/eyrie/eyrie-rt $KEYSTONE_DIR/buildroot.overlay/root/test.hello/

$ insmod keystone-driver.ko
./App.client Enclave.eapp.riscv eyrie-rt
hello world!
```

5.4.2.3 test_gp

Run test_gp

```
$ cp test_gp/keystone/Enclave/Enclave.eapp.riscv $KEYSTONE_DIR/buildroot.overlay/root/test_gp/
$ cp test_gp/keystone/Enclave/App.client $KEYSTONE_DIR/buildroot.overlay/root/test_gp/
$ cp $KEYSTONE_SDK_DIR/rts/eyrie/eyrie-rt $KEYSTONE_DIR/buildroot.overlay/root/test_gp/
$ insmod keystone-driver.ko
$ ./App.client Enclave.eapp.riscv eyrie-rt

5.6 ta-ref with SGX

Build ta-ref for Intel SGX platforms

5.6.1 Cloning source and building

Clone the source

```

$ git clone https://192.168.100.100/rinkai/ta-ref.git
$ cd ta-ref
$ git checkout teep-device-tb-slim
$ git submodule sync --recursive
$ git submodule update --init --recursive

```

Build

```

$ source /opt/intel/sgxsdk/environment
$ source env/sgx.x64.sh
$ make build test-bin MACHINE=NUC TEST_DIR=test.hello
$ make build test-bin MACHINE=NUC TEST_DIR=test.gp

```

```

6 Running on Development Boards

6.1 Keystone, Unleashed

Make sure Keystone and other dependant sources have been built

6.1.1 Preparation of rootfs on SD Card

Build a modified gdisk which can handle the sifive specific partition types.

Prerequisites: libncursesw5-dev, libpopt-dev

```
$ cd ..
$ sudo apt install libncursesw5-dev lib64ncurses5-dev uuid-dev libpopt-dev build-essential
$ git clone https://192.168.100.100/rinkai/gptfdisk.git
$ cd gptfdisk
$ git checkout -b risc-v-sd 3d6a15873f582803aa8ad3288b3e32d3daff9fde
$ make
```

6.1.1.1 Create SD-card partition manually

```
$ sudo ./gdisk /dev/mmcblk0
GPT fdisk (gdisk) version 1.0.4
Partition table scan:
  MBR: protective
  BSD: not present
  APM: not present
  GPT: present
Found valid GPT with protective MBR; using GPT.
Command (? for help): n
Partition number (1-128, default 1): 1
First sector (34-15523806, default = 2048) or {+-}size{KMGTP}:
Last sector (2048-15523806, default = 15523806) or {+-}size{KMGTP}: 67583
Current type is 'Linux filesystem'
Hex code or GUID (L to show codes, Enter = 8300): 5202
Changed type of partition to 'SiFive bare-metal (or stage 2 loader)'
Command (? for help): n
Partition number (2-128, default 2): 4
First sector (34-15523806, default = 67584) or {+-}size{KMGTP}:
Last sector (67584-15523806, default = 15523806) or {+-}size{KMGTP}: 67839
Current type is 'Linux filesystem'
Hex code or GUID (L to show codes, Enter = 8300): 5201
Changed type of partition to 'SiFive FSBL (first-stage bootloader)'
Command (? for help): n
Partition number (2-128, default 2):
First sector (34-15523806, default = 69632) or {+-}size{KMGTP}: 264192
Last sector (264192-15523806, default = 15523806) or {+-}size{KMGTP}:
Current type is 'Linux filesystem'
Hex code or GUID (L to show codes, Enter = 8300): 8300
Changed type of partition to 'Linux filesystem'
Command (? for help): p
Disk /dev/mmcblk0: 15523840 sectors, 7.4 GiB
Sector size (logical/physical): 512/512 bytes
Disk identifier (GUID): 11A0F8F6-D5DE-4993-8C0D-D543DFBA17AD
Partition table holds up to 128 entries
Main partition table begins at sector 2 and ends at sector 33
First usable sector is 34, last usable sector is 15523806
Partitions will be aligned on 2048-sector boundaries
Total free space is 198366 sectors (96.9 MiB)

Number Start (sector) End (sector) Size Code Name
  1         2048         67583   32.0 MiB  5202 SiFive bare-metal (...)
  2        264192        15523806   7.3 GiB  8300 Linux filesystem
  4         67584         67839   128.0 KiB  5201 SiFive FSBL (first-...

Command (? for help): i
Partition number (1-4): 4
Partition GUID code: 5B193300-FC78-40CD-8002-E86C45580B47 (SiFive FSBL (first-stage bootloader))
Partition unique GUID: FC1FBC7C-EC94-4B0A-9DAF-0ED85452B885
First sector: 67584 (at 33.0 MiB)
Last sector: 67839 (at 33.1 MiB)
Partition size: 256 sectors (128.0 KiB)
Attribute flags: 0000000000000000
Partition name: 'SiFive FSBL (first-stage bootloader)'
Command (? for help): i
Partition number (1-4): 1
Partition GUID code: 2E54B353-1271-4842-806F-E436D6AF6985 (SiFive bare-metal (or stage 2 loader))
Partition unique GUID: 2FFF07EF-E44A-4278-A16D-C29697C6653D
First sector: 2048 (at 1024.0 KiB)
Last sector: 67583 (at 33.0 MiB)
Partition size: 65536 sectors (32.0 MiB)
Attribute flags: 0000000000000000
Partition name: 'SiFive bare-metal (or stage 2 loader)'
Command (? for help): wq
Final checks complete. About to write GPT data. THIS WILL OVERWRITE EXISTING
PARTITIONS!!
Do you want to proceed? (Y/N): y
OK; writing new GUID partition table (GPT) to /dev/mmcblk1.
Warning: The kernel is still using the old partition table.
The new table will be used at the next reboot or after you
run partprobe(8) or kpartx(8)
The operation has completed successfully.
```

6.1.1.2 Write boot and rootfs files into SD-card

Build FSBL for hifive-Unleased board

```
$ git clone https://github.com/keystone-enclave/freedom-u540-c000-bootloader.git
$ cd freedom-u540-c000-bootloader
$ git checkout -b dev-unleased bbfcc288fb438312af51adef420aa444a0833452
$ # Make sure riscv64 compiler set to PATH (export PATH=$KEYSTONE_DIR/riscv/bin:$PATH)
$ make
```

Writing fsbl.bin and bbl.bin

```
$ sudo dd if=freedom-u540-c000-bootloader/fsbl.bin of=/dev/mmcblk0p4 bs=4096 conv=fsync
$ sudo dd if=$KEYSTONE_DIR/hifive-work/bbl.bin of=/dev/mmcblk0p1 bs=4096 conv=fsync
```

Once files written, insert the SD-card into unleased

6.1.2 Copying binaries of test_hello and test_gp

```
$ sudo mount /dev/mmcblk0p1 /media/rootfs/
$ sudo mkdir /media/rootfs/root/{test_hello,test_gp}
```

Copy test_hello

```
$ sudo cp ta-ref/test_hello/keystone/Enclave/Enclave.eapp.riscv /media/rootfs/root/test_hello/
$ sudo cp ta-ref/test_hello/keystone/Enclave/App.client /media/rootfs/root/test_hello/
$ sudo cp $KEYSTONE.SDK_DIR/rts/eyrie/eyrie-rt /media/rootfs/root/test_hello/
```

Copy test_gp

```
$ sudo cp ta-ref/test_gp/keystone/Enclave/Enclave.eapp.riscv /media/rootfs/root/test_gp/
$ sudo cp ta-ref/test_gp/keystone/Enclave/App.client /media/rootfs/root/test_gp/
$ sudo cp $KEYSTONE.SDK_DIR/rts/eyrie/eyrie-rt /media/rootfs/root/test_gp/
```

Now, we are ready to test on unleased board.

6.1.3 Check test_hello and test_gp on Unleased

1. Insert SD-card into unleased board
2. Boot Hifive-Unleased board
3. Connect Unleased board with your development machine over USB-Serial cable (/dev/ttyUSB1)
4. Checking on Unleased
Login to serial console with user=root, passwd=sifive

```
buildroot login: root
Password:
$
```

test_hello:

```
$ insmod keystone-driver.ko
./App.client Enclave.eapp.riscv eyrie-rt
hello world!
```

test_gp:

```

$ insmod keystone-driver.ko
./App.client Enclave.eapp.riscv eyrie-rt

Test is successful.

6.2 OP-TEE, RPI3

Make sure OP-TEE v3.9.0 and other dependant sources have been built

6.2.1 Preparation of rootfs on SD Card

Use following examples to create partitions of boot and roots on SD-card

```
$ make img-help
$ fdisk /dev/sdx # where sdx is the name of your sd-card
> p # prints partition table
> d # repeat until all partitions are deleted
> n # create a new partition
> p # create primary
> 1 # make it the first partition
> <enter> # use the default sector
> +32M # create a boot partition with 32MB of space
> n # create rootfs partition
> p
> 2
> <enter>
> <enter> # fill the remaining disk, adjust size to fit your needs
> t # change partition type
> 1 # select first partition
> e # use type 'e' (FAT16)
> a # make partition bootable
> 1 # select first partition
> p # double check everything looks right
> w # write partition table to disk.
```

Usually your SD-card detected as `/dev/mmcblk0`. After partition it looks like below BOOT partition = `/dev/mmcblk0p1` rootfs partition = `/dev/mmcblk0p2`

Write boot file

```
$ mkfs.vfat -F16 -n BOOT /dev/mmcblk0p1
$ mkdir -p /media/boot
$ sudo mount /dev/mmcblk0p1 /media/boot
$ cd /media
$ gunzip -cd optee.3.9.0.rpi3/out-br/images/rootfs.cpio.gz | sudo cpio -idmv "boot/*"
$ umount boot
```

Write rootfs

```
$ mkfs.ext4 -L rootfs /dev/mmcblk0p2
$ mkdir -p /media/rootfs
$ sudo mount /dev/mmcblk0p2 /media/rootfs
$ cd rootfs
$ gunzip -cd <your-base-dir>/optee.3.9.0.rpi3/build/./out-br/images/rootfs.cpio.gz | sudo cpio -idmv
$ rm -rf /media/rootfs/boot/*
$ cd .. && sudo umount rootfs
```

If you use CI from AIST, download `rpi3_sdimage` as follows

```
$ wget http://192.168.100.100:2000/optee-rpi3.sdimage.tar.xz
$ tar xf optee-rpi3.sdimage.tar.xz
$ dd if=rpi3.sdimage.bin of=/dev/mmcblk0p2 conv=fsync bs=4096
```

Now SD-card is ready to boot RPI3.

6.2.2 Copying binaries of test_hello and test_gp to rootfs partition

Copying test_hello & test_gp

```
$ sudo mount /dev/mmcblk0p2 /media/rootfs
$ sudo mkdir -p /media/rootfs/home/gitlab/out/{test_hello,test_gp}
$ sudo cp ta-ref/test_hello/optee/App/optee.ref.ta /media/rootfs/home/gitlab/out/test_hello/
$ sudo cp ta-ref/test_hello/optee/Enclave/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
/media/rootfs/home/gitlab/out/test_hello/
$ sudo cp ta-ref/test_gp/optee/App/optee.ref.ta /media/rootfs/home/gitlab/out/test_gp/
$ sudo cp ta-ref/test_gp/optee/Enclave/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
/media/rootfs/home/gitlab/out/test_gp/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
$ sudo cp ta-ref/test_gp/optee/Enclave/Enclave.nm /media/rootfs/home/gitlab/out/test_gp/
```

6.2.3 Check test_hello and test_gp

1. Insert SD-card into RPI3 board, then power-on
2. Connect RPI3 board Serial console to your laptop (/dev/ttyUSB0 over minicom)
3. Checking on RPI3

Login to Serial console and enter "root" as username

```
buildroot login: root
Password:
$
```

test_hello:

```
$ cp /home/gitlab/out/test_hello/
$ cp a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta /home/gitlab/out/
$ ln -s /home/gitlab/out/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
/lib64/optee.armtz/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
$ ./optee.ref.ta
--- enclave log start---
ecall.ta_main() start
hello world!
ecall.ta_main() end
--- enclave log end---
```

If executed successfully, you see above messages

test_gp:

```
$ cd /home/gitlab/out/test_gp/
$ cp a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta /home/gitlab/out/
$ ln -s /home/gitlab/out/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
/lib64/optee.armtz/a6f77c1e-96fe-4a0e-9e74-262582a4c8f1.ta
$ ./optee.ref.ta
start TEEC.InvokeCommand
--- enclave log start---
ecall.ta_main() start
```

```

6.3 SGX, NUC

Make sure SGX SDK, sgx driver and other dependant sources have been built and installed on NUC machine

6.3.1 Copying binaries of test.hello and test_gp to NUC machine

Login to NUC machine over SSH (Assuming that SSH enabled on NIC machine). Assuming that `ta-ref` was natively built on NUC machine at `~/ta-ref`

```

$ ssh <ssh-user>@<IP-Address> 'mkdir -p ~/test_hello,test_gp'
$ scp ta-ref/test_hello/sgx/Enclave/enclave.signed.so <ssh-user>@<IP-Address>:~/test_hello
$ scp ta-ref/test_hello/sgx/App/sgx.app <ssh-user>@<IP-Address>:~/test_hello
$ scp ta-ref/test_gp/sgx/Enclave/enclave.signed.so <ssh-user>@<IP-Address>:~/test_gp
$ scp ta-ref/test_gp/sgx/App/sgx.app <ssh-user>@<IP-Address>:~/test_gp

```

Now can login to NUC machine for further testing.

6.3.2 Check test.hello and test_gp

Checking test.hello

```
$ cd ~/test.hello
$ ./sgx_app
hello world!
Info: Enclave successfully returned.
```

Checking test.gp

```
$ cd ~/test.gp
$ ./sgx_app
main start

9 Class Documentation

9.1 __TEE_ObjectHandle Struct Reference

```
#include <tee_api.tee.types.h>
```

Public Attributes

- unsigned int [type](#)
- int [flags](#)
- int [desc](#)
- mbedtls_aes_context [persist_ctx](#)
- unsigned char [persist_iv](#) [TEE_OBJECT_NONCE_SIZE]
- unsigned char [public_key](#) [TEE_OBJECT_KEY_SIZE]
- unsigned char [private_key](#) [TEE_OBJECT_SKEY_SIZE]

9.1.1 Member Data Documentation

9.1.1.1 desc `int __TEE_ObjectHandle::desc`

9.1.1.2 flags `int __TEE_ObjectHandle::flags`

9.1.1.3 persist_ctx `mbedtls.aes.context __TEE_ObjectHandle::persist_ctx`

9.1.1.4 persist_iv `unsigned char __TEE_ObjectHandle::persist_iv`

9.1.1.5 private_key `unsigned char __TEE_ObjectHandle::private_key`

9.1.1.6 public_key `unsigned char __TEE_ObjectHandle::public_key`

9.1.1.7 type `unsigned int __TEE_ObjectHandle::type`

The documentation for this struct was generated from the following files:

- [ta-ref/api/keystone/tee_api_tee_types.h](#)
- [ta-ref/api/sgx/tee_api_tee_types.h](#)

9.2 __TEE_OperationHandle Struct Reference

```
#include <tee_api_tee_types.h>
```

Public Attributes

- int [mode](#)
- int [flags](#)
- int [alg](#)
- `sha3.ctx.t` [ctx](#)
- `mbedtls.aes.context` [aectx](#)
- `mbedtls.gcm.context` [aegcmctx](#)
- int [aegcm_state](#)
- unsigned char [aeiv](#) [TEE_OBJECT_NONCE_SIZE]
- unsigned char [aekey](#) [32]
- unsigned char [pubkey](#) [TEE_OBJECT_KEY_SIZE]
- unsigned char [prikey](#) [TEE_OBJECT_SKEY_SIZE]

9.2.1 Member Data Documentation

9.2.1.1 aectx mbedtls_aes_context __TEE_OperationHandle::aectx

9.2.1.2 aegcm_state int __TEE_OperationHandle::aegcm_state

9.2.1.3 aegcmctx mbedtls_gcm_context __TEE_OperationHandle::aegcmctx

9.2.1.4 aeiv unsigned char __TEE_OperationHandle::aeiv

9.2.1.5 aekey unsigned char __TEE_OperationHandle::aekey

9.2.1.6 alg int __TEE_OperationHandle::alg

9.2.1.7 ctx sha3_ctx_t __TEE_OperationHandle::ctx

9.2.1.8 flags int __TEE_OperationHandle::flags

9.2.1.9 mode int __TEE_OperationHandle::mode

9.2.1.10 prikey unsigned char __TEE_OperationHandle::prikey

9.2.1.11 pubkey unsigned char __TEE_OperationHandle::pubkey

The documentation for this struct was generated from the following files:

- ta-ref/api/keystone/[tee_api_tee_types.h](#)
- ta-ref/api/sgx/[tee_api_tee_types.h](#)

9.3 addrinfo Struct Reference

```
#include <tee_api_types.h>
```

Collaboration diagram for addrinfo:

Public Attributes

- int [ai_flags](#)
- int [ai_family](#)
- int [ai_socktype](#)
- int [ai_protocol](#)
- [socklen_t](#) [ai_addrlen](#)
- struct sockaddr * [ai_addr](#)
- char * [ai_canonname](#)
- struct [addrinfo](#) * [ai_next](#)

9.3.1 Member Data Documentation

9.3.1.1 ai_addr struct sockaddr* addrinfo::ai_addr

9.3.1.2 ai_addrlen [socklen_t](#) addrinfo::ai_addrlen

9.3.1.3 ai_canonname char* addrinfo::ai_canonname

9.3.1.4 ai_family int addrinfo::ai_family

9.3.1.5 ai_flags int addrinfo::ai_flags

9.3.1.6 ai_next struct [addrinfo](#)* addrinfo::ai_next

9.3.1.7 ai_protocol int addrinfo::ai_protocol

9.3.1.8 ai_socktype int addrinfo::ai_socktype

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[tee_api_types.h](#)

9.4 enclave_report Struct Reference

```
#include <report.h>
```

Public Attributes

- uint8_t [hash](#) [MDSIZE]
- uint64_t [data_len](#)
- uint8_t [data](#) [ATTEST_DATA_MAXLEN]
- uint8_t [signature](#) [SIGNATURE_SIZE]

9.4.1 Member Data Documentation

9.4.1.1 data uint8_t enclave_report::data[ATTEST_DATA_MAXLEN]

9.4.1.2 data_len uint64_t enclave_report::data_len

9.4.1.3 hash uint8_t enclave_report::hash[MDSIZE]

9.4.1.4 signature `uint8_t enclave_report::signature[SIGNATURE_SIZE]`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/report.h](#)

9.5 pollfd Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- `int` [fd](#)
- `short int` [events](#)
- `short int` [revents](#)

9.5.1 Member Data Documentation

9.5.1.1 events `short int pollfd::events`

9.5.1.2 fd `int pollfd::fd`

9.5.1.3 revents `short int pollfd::revents`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_api_types.h](#)

9.6 report Struct Reference

```
#include <report.h>
```

Collaboration diagram for report:

Public Attributes

- struct [enclave_report](#) [enclave](#)
- struct [sm_report](#) [sm](#)
- uint8_t [dev_public_key](#) [PUBLIC_KEY_SIZE]

9.6.1 Member Data Documentation

9.6.1.1 dev_public_key uint8_t report::dev_public_key[PUBLIC_KEY_SIZE]

9.6.1.2 enclave struct [enclave_report](#) report::enclave

9.6.1.3 sm struct [sm_report](#) report::sm

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[report.h](#)

9.7 sm_report Struct Reference

```
#include <report.h>
```

Public Attributes

- uint8_t [hash](#) [MDSIZE]
- uint8_t [public_key](#) [PUBLIC_KEY_SIZE]
- uint8_t [signature](#) [SIGNATURE_SIZE]

9.7.1 Member Data Documentation

9.7.1.1 hash uint8_t sm_report::hash[MDSIZE]

9.7.1.2 public_key uint8_t sm_report::public_key[PUBLIC_KEY_SIZE]

9.7.1.3 signature `uint8_t sm_report::signature[SIGNATURE_SIZE]`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/report.h](#)

9.8 TEE Attribute Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- `uint32_t attributeID`
- `union {`
 - `struct {`
 - `void * buffer`
 - `uint32_t length`
 - `} ref`
 - `struct {`
 - `uint32_t a`
 - `uint32_t b`
 - `} value`
- `} content`

9.8.1 Member Data Documentation

9.8.1.1 `a` `uint32_t TEE_Attribute::a`

9.8.1.2 `attributeID` `uint32_t TEE_Attribute::attributeID`

9.8.1.3 `b` `uint32_t TEE_Attribute::b`

9.8.1.4 `buffer` `void* TEE_Attribute::buffer`

9.8.1.5 `union { ... } TEE_Attribute::content`

9.8.1.6 **length** `uint32_t TEE_Attribute::length`

9.8.1.7 `struct { ... } TEE_Attribute::ref`

9.8.1.8 `struct { ... } TEE_Attribute::value`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_api_types.h](#)

9.9 TEE_Identity Struct Reference

```
#include <tee_api_types.h>
```

Collaboration diagram for TEE_Identity:

Public Attributes

- `uint32_t login`
- `TEE_UUID uuid`

9.9.1 Member Data Documentation

9.9.1.1 login `uint32_t TEE_Identity::login`

9.9.1.2 uuid `TEE_UUID TEE_Identity::uuid`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_api_types.h`

9.10 TEE_ObjectInfo Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- `uint32_t objectType`
- `union {
 uint32_t keySize
 uint32_t objectSize
};`
- `union {
 uint32_t maxKeySize
 uint32_t maxObjectSize
};`
- `uint32_t objectUsage`
- `uint32_t dataSize`
- `uint32_t dataPosition`
- `uint32_t handleFlags`

9.10.1 Member Data Documentation

9.10.1.1 `__extension__ union { ... } TEE_ObjectInfo::@3`

9.10.1.2 `__extension__ union { ... } TEE_ObjectInfo::@5`

9.10.1.3 dataPosition `uint32_t TEE_ObjectInfo::dataPosition`

9.10.1.4 dataSize uint32_t TEE_ObjectInfo::dataSize

9.10.1.5 handleFlags uint32_t TEE_ObjectInfo::handleFlags

9.10.1.6 keySize uint32_t TEE_ObjectInfo::keySize

9.10.1.7 maxKeySize uint32_t TEE_ObjectInfo::maxKeySize

9.10.1.8 maxObjectSize uint32_t TEE_ObjectInfo::maxObjectSize

9.10.1.9 objectSize uint32_t TEE_ObjectInfo::objectSize

9.10.1.10 objectType uint32_t TEE_ObjectInfo::objectType

9.10.1.11 objectUsage uint32_t TEE_ObjectInfo::objectUsage

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[tee_api_types.h](#)

9.11 TEE_OperationInfo Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- uint32_t [algorithm](#)
- uint32_t [operationClass](#)
- uint32_t [mode](#)
- uint32_t [digestLength](#)
- uint32_t [maxKeySize](#)
- uint32_t [keySize](#)
- uint32_t [requiredKeyUsage](#)
- uint32_t [handleState](#)

9.11.1 Member Data Documentation

9.11.1.1 algorithm uint32_t TEE_OperationInfo::algorithm

9.11.1.2 digestLength uint32_t TEE_OperationInfo::digestLength

9.11.1.3 handleState uint32_t TEE_OperationInfo::handleState

9.11.1.4 keySize uint32_t TEE_OperationInfo::keySize

9.11.1.5 maxKeySize uint32_t TEE_OperationInfo::maxKeySize

9.11.1.6 mode uint32_t TEE_OperationInfo::mode

9.11.1.7 operationClass uint32_t TEE_OperationInfo::operationClass

9.11.1.8 requiredKeyUsage uint32_t TEE_OperationInfo::requiredKeyUsage

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[tee_api_types.h](#)

9.12 TEE_OperationInfoKey Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- uint32_t [keySize](#)
- uint32_t [requiredKeyUsage](#)

9.12.1 Member Data Documentation

9.12.1.1 keySize uint32_t TEE_OperationInfoKey::keySize

9.12.1.2 requiredKeyUsage uint32_t TEE_OperationInfoKey::requiredKeyUsage

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[tee_api_types.h](#)

9.13 TEE_OperationInfoMultiple Struct Reference

```
#include <tee_api_types.h>
```

Collaboration diagram for TEE_OperationInfoMultiple:

**Public Attributes**

- uint32_t [algorithm](#)
- uint32_t [operationClass](#)
- uint32_t [mode](#)
- uint32_t [digestLength](#)

- uint32_t [operationState](#)
- uint32_t [numberOfKeys](#)
- [TEE_OperationInfoKey](#) [keyInformation](#) []

9.13.1 Member Data Documentation

9.13.1.1 algorithm `uint32_t TEE_OperationInfoMultiple::algorithm`

9.13.1.2 digestLength `uint32_t TEE_OperationInfoMultiple::digestLength`

9.13.1.3 handleState `uint32_t TEE_OperationInfoMultiple::handleState`

9.13.1.4 keyInformation `TEE_OperationInfoKey TEE_OperationInfoMultiple::keyInformation[]`

9.13.1.5 maxKeySize `uint32_t TEE_OperationInfoMultiple::maxKeySize`

9.13.1.6 mode `uint32_t TEE_OperationInfoMultiple::mode`

9.13.1.7 numberOfKeys `uint32_t TEE_OperationInfoMultiple::numberOfKeys`

9.13.1.8 operationClass `uint32_t TEE_OperationInfoMultiple::operationClass`

9.13.1.9 operationState `uint32_t TEE_OperationInfoMultiple::operationState`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_api_types.h`

9.14 TEE_Param Union Reference

```
#include <tee_api_types.h>
```

Public Attributes

- struct {
 void * [buffer](#)
 uint32_t [size](#)
} [memref](#)
- struct {
 uint32_t [a](#)
 uint32_t [b](#)
} [value](#)

9.14.1 Member Data Documentation

9.14.1.1 a uint32_t TEE_Param::a

9.14.1.2 b uint32_t TEE_Param::b

9.14.1.3 buffer void* TEE_Param::buffer

9.14.1.4 struct { ... } TEE_Param::memref

9.14.1.5 size uint32_t TEE_Param::size

9.14.1.6 struct { ... } TEE_Param::value

The documentation for this union was generated from the following file:

- [ta-ref/api/include/tee_api_types.h](#)

9.15 TEE_SEAID Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- `uint8_t * buffer`
- `size_t bufferLen`

9.15.1 Member Data Documentation

9.15.1.1 `buffer` `uint8_t* TEE_SEAID::buffer`

9.15.1.2 `bufferLen` `size_t TEE_SEAID::bufferLen`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_api_types.h`

9.16 TEE_SERedReaderProperties Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- `bool sePresent`
- `bool teeOnly`
- `bool selectResponseEnable`

9.16.1 Member Data Documentation

9.16.1.1 `selectResponseEnable` `bool TEE_SERedReaderProperties::selectResponseEnable`

9.16.1.2 `sePresent` `bool TEE_SERedReaderProperties::sePresent`

9.16.1.3 `teeOnly` `bool TEE_SERedReaderProperties::teeOnly`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_api_types.h`

9.17 TEE_Time Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- uint32_t [seconds](#)
- uint32_t [millis](#)

9.17.1 Member Data Documentation

9.17.1.1 millis uint32_t TEE_Time::millis

9.17.1.2 seconds uint32_t TEE_Time::seconds

The documentation for this struct was generated from the following file:

- ta-ref/api/include/[tee_api_types.h](#)

9.18 TEE_UUID Struct Reference

```
#include <tee_api_types.h>
```

Public Attributes

- uint32_t [timeLow](#)
- uint16_t [timeMid](#)
- uint16_t [timeHiAndVersion](#)
- uint8_t [clockSeqAndNode](#) [8]

9.18.1 Member Data Documentation

9.18.1.1 clockSeqAndNode uint8_t TEE_UUID::clockSeqAndNode[8]

9.18.1.2 timeHiAndVersion `uint16_t TEE_UUID::timeHiAndVersion`

9.18.1.3 timeLow `uint32_t TEE_UUID::timeLow`

9.18.1.4 timeMid `uint16_t TEE_UUID::timeMid`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_api_types.h](#)

9.19 TEEC_Context Struct Reference

```
#include <tee_client_api.h>
```

Public Attributes

- `int` [fd](#)
- `bool` [reg_mem](#)

9.19.1 Detailed Description

struct [TEEC_Context](#) - Represents a connection between a client application and a TEE.

9.19.2 Member Data Documentation

9.19.2.1 fd `int TEEC_Context::fd`

9.19.2.2 reg_mem `bool TEEC_Context::reg_mem`

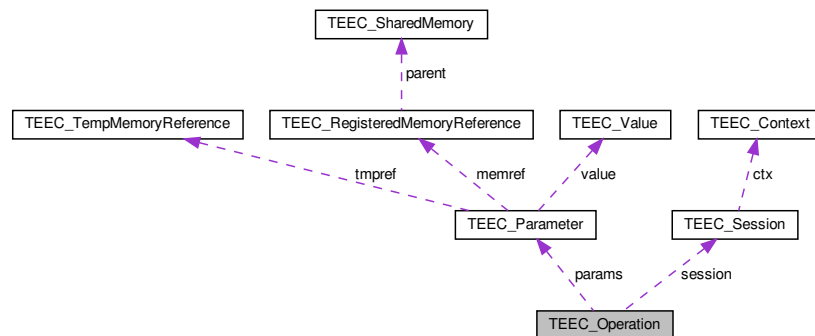

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.20 TEEC_Operation Struct Reference

```
#include <tee_client_api.h>
```

Collaboration diagram for TEEC_Operation:

Public Attributes

- `uint32_t started`
- `uint32_t paramTypes`
- `TEEC_Parameter params` [TEEC_CONFIG_PAYLOAD_REF_COUNT]
- `TEEC_Session * session`

9.20.1 Detailed Description

struct [TEEC_Operation](#) - Holds information and memory references used in [TEEC_InvokeCommand\(\)](#).

Parameters

<i>started</i>	Client must initialize to zero if it needs to cancel an operation about to be performed.
<i>paramTypes</i>	Type of data passed. Use TEEC_PARAMS_TYPE macro to create the correct flags. 0 means TEEC_NONE is passed for all params.
<i>params</i>	Array of parameters of type TEEC_Parameter .
<i>session</i>	Internal pointer to the last session used by TEEC_InvokeCommand with this operation.

9.20.2 Member Data Documentation

9.20.2.1 params `TEEC_Parameter` `TEEC_Operation::params` [TEEC_CONFIG_PAYLOAD_REF_COUNT]

9.20.2.2 paramTypes `uint32_t TEEC_Operation::paramTypes`

9.20.2.3 session `TEEC_Session* TEEC_Operation::session`

9.20.2.4 started `uint32_t TEEC_Operation::started`

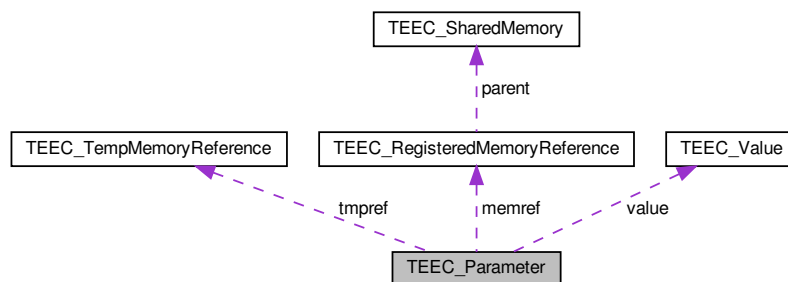

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.21 TEEC_Parameter Union Reference

```
#include <tee_client_api.h>
```

Collaboration diagram for TEEC_Parameter:

Public Attributes

- [TEEC_TempMemoryReference tmpref](#)
- [TEEC_RegisteredMemoryReference memref](#)
- [TEEC_Value value](#)

9.21.1 Detailed Description

union [TEEC_Parameter](#) - Memory container to be used when passing data between client application and trusted code.

Either the client uses a shared memory reference, parts of it or a small raw data container.

Parameters

<i>tmpref</i>	A temporary memory reference only valid for the duration of the operation.
<i>memref</i>	The entire shared memory or parts of it.
<i>value</i>	The small raw data container to use

9.21.2 Member Data Documentation

9.21.2.1 memref [TEEC_RegisteredMemoryReference](#) `TEEC_Parameter::memref`

9.21.2.2 tmpref [TEEC_TempMemoryReference](#) `TEEC_Parameter::tmpref`

9.21.2.3 value [TEEC_Value](#) `TEEC_Parameter::value`

The documentation for this union was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.22 TEEC_RegisteredMemoryReference Struct Reference

```
#include <tee_client_api.h>
```

Collaboration diagram for TEEC_RegisteredMemoryReference:

Public Attributes

- [TEEC_SharedMemory](#) * [parent](#)
- [size_t](#) [size](#)
- [size_t](#) [offset](#)

9.22.1 Detailed Description

struct [TEEC_RegisteredMemoryReference](#) - use a pre-registered or pre-allocated shared memory block of memory to transfer data between a client application and trusted code.

Parameters

<i>parent</i>	Points to a shared memory structure. The memory reference may utilize the whole shared memory or only a part of it. Must not be NULL
<i>size</i>	The size, in bytes, of the memory buffer.
<i>offset</i>	The offset, in bytes, of the referenced memory region from the start of the shared memory block.

9.22.2 Member Data Documentation

9.22.2.1 offset `size_t TEEC_RegisteredMemoryReference::offset`

9.22.2.2 parent `TEEC_SharedMemory* TEEC_RegisteredMemoryReference::parent`

9.22.2.3 size `size_t TEEC_RegisteredMemoryReference::size`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_client_api.h`

9.23 TEEC_Session Struct Reference

```
#include <tee_client_api.h>
```

Collaboration diagram for TEEC_Session:

Public Attributes

- `TEEC_Context * ctx`
- `uint32_t session_id`

9.23.1 Detailed Description

struct `TEEC_Session` - Represents a connection between a client application and a trusted application.

9.23.2 Member Data Documentation

9.23.2.1 `ctx` `TEEC_Context*` `TEEC_Session::ctx`

9.23.2.2 `session_id` `uint32_t` `TEEC_Session::session_id`

The documentation for this struct was generated from the following file:

- `ta-ref/api/include/tee_client_api.h`

9.24 TEEC_SharedMemory Struct Reference

```
#include <tee_client_api.h>
```

Public Attributes

- void * [buffer](#)
- size_t [size](#)
- uint32_t [flags](#)
- int [id](#)
- size_t [allocated_size](#)
- void * [shadow_buffer](#)
- int [registered_fd](#)
- bool [buffer_allocated](#)

9.24.1 Detailed Description

struct [TEEC_SharedMemory](#) - Memory to transfer data between a client application and trusted code.

Parameters

<i>buffer</i>	The memory buffer which is to be, or has been, shared with the TEE.
<i>size</i>	The size, in bytes, of the memory buffer.
<i>flags</i>	Bit-vector which holds properties of buffer. The bit-vector can contain either or both of the TEEC_MEM_INPUT and TEEC_MEM_OUTPUT flags.

A shared memory block is a region of memory allocated in the context of the client application memory space that can be used to transfer data between that client application and a trusted application. The user of this struct is responsible to populate the buffer pointer.

9.24.2 Member Data Documentation

9.24.2.1 [allocated_size](#) `size_t TEEC_SharedMemory::allocated_size`

9.24.2.2 [buffer](#) `void* TEEC_SharedMemory::buffer`

9.24.2.3 [buffer_allocated](#) `bool TEEC_SharedMemory::buffer_allocated`

9.24.2.4 [flags](#) `uint32_t TEEC_SharedMemory::flags`

9.24.2.5 id `int TEEC_SharedMemory::id`

9.24.2.6 registered_fd `int TEEC_SharedMemory::registered_fd`

9.24.2.7 shadow_buffer `void* TEEC_SharedMemory::shadow_buffer`

9.24.2.8 size `size_t TEEC_SharedMemory::size`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.25 TEEC_TempMemoryReference Struct Reference

```
#include <tee_client_api.h>
```

Public Attributes

- `void *` [buffer](#)
- `size_t` [size](#)

9.25.1 Detailed Description

struct [TEEC_TempMemoryReference](#) - Temporary memory to transfer data between a client application and trusted code, only used for the duration of the operation.

Parameters

<i>buffer</i>	The memory buffer which is to be, or has been shared with the TEE.
<i>size</i>	The size, in bytes, of the memory buffer.

A memory buffer that is registered temporarily for the duration of the operation to be called.

9.25.2 Member Data Documentation

9.25.2.1 buffer `void* TEEC_TempMemoryReference::buffer`

9.25.2.2 size `size_t TEEC_TempMemoryReference::size`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.26 TEEC_UUID Struct Reference

```
#include <tee_client_api.h>
```

Public Attributes

- `uint32_t timeLow`
- `uint16_t timeMid`
- `uint16_t timeHiAndVersion`
- `uint8_t clockSeqAndNode [8]`

9.26.1 Detailed Description

This type contains a Universally Unique Resource Identifier (UUID) type as defined in RFC4122. These UUID values are used to identify Trusted Applications.

9.26.2 Member Data Documentation

9.26.2.1 clockSeqAndNode `uint8_t TEEC_UUID::clockSeqAndNode[8]`

9.26.2.2 timeHiAndVersion `uint16_t TEEC_UUID::timeHiAndVersion`

9.26.2.3 timeLow `uint32_t TEEC_UUID::timeLow`

9.26.2.4 timeMid `uint16_t TEEC_UUID::timeMid`

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

9.27 TEEC_Value Struct Reference

```
#include <tee-client_api.h>
```

Public Attributes

- `uint32_t a`
- `uint32_t b`

9.27.1 Detailed Description

struct [TEEC_Value](#) - Small raw data container

Instead of allocating a shared memory buffer this structure can be used to pass small raw data between a client application and trusted code.

Parameters

<i>a</i>	The first integer value.
<i>b</i>	The second second value.

9.27.2 Member Data Documentation

9.27.2.1 **a** `uint32_t TEEC_Value::a`

9.27.2.2 **b** `uint32_t TEEC_Value::b`

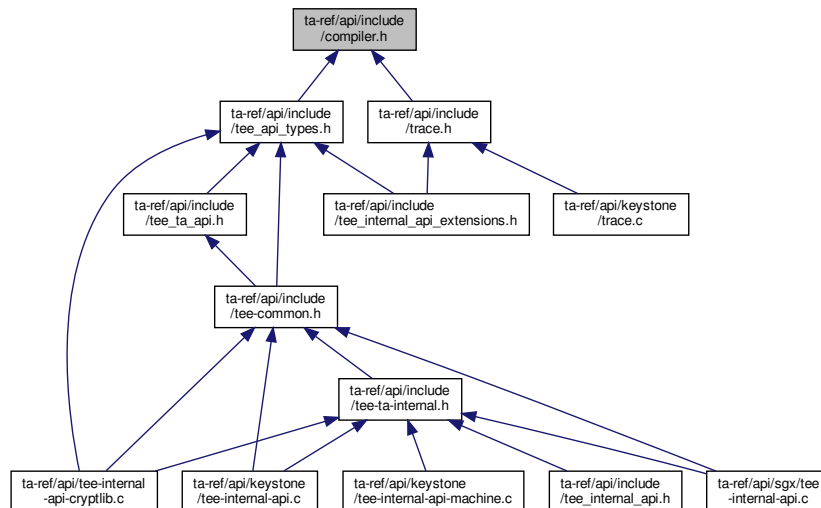

The documentation for this struct was generated from the following file:

- [ta-ref/api/include/tee_client_api.h](#)

122 /*
123  * Dealing with detecting overflow in multiplication of integers.
124  *
125  * First step is to remove two corner cases with the minum signed integer
126  * which can't be represented as a positive integer + sign.
127  * Multiply with 0 or 1 can't overflow, no checking needed of the operation,
128  * only if it can be assigned to the result.
129  *
130  * After the corner cases are eliminated we convert the two factors to
131  * positive unsigned values, keeping track of the original in another
132  * variable which is used at the end to determine the sign of the product.
133  *
134  * The two terms (a and b) are divided into upper and lower half (x1 upper
135  * and x0 lower), so the product is:
136  * ((a1 << hshift) + a0) * ((b1 << hshift) + b0)
137  * which also is:
138  * ((a1 * b1) << (hshift * 2)) + (T1)
139  * ((a1 * b0 + a0 * b1) << hshift) + (T2)
140  * (a0 * b0) (T3)
141  *
142  * From this we can tell and (a1 * b1) has to be 0 or we'll overflow, that
143  * is, at least one of a1 or b1 has to be 0. Once this has been checked the
144  * addition: ((a1 * b0) << hshift) + ((a0 * b1) << hshift)
145  * isn't an addition as one of the terms will be 0.
146  *
147  * Since each factor in: (a0 * b0)
148  * only uses half the capacity of the underlaying type it can't overflow
149  *
150  * The addition of T2 and T3 can overflow so we use __INTOF_ADD() to
151  * perform that addition. If the addition succeeds without overflow the
152  * result is assigned the required sign and checked for overflow again.
153  */

- **TEE_Result TEE_AEDecryptFinal** (**TEE_OperationHandle** operation, const void *srcData, uint32_t srcLen, void *destData, uint32_t *destLen, void *tag, uint32_t tagLen)
Crypto, Authenticated Encryption with Symmetric key Verification Functions.
- void **TEE_CipherInit** (**TEE_OperationHandle** operation, const void *nonce, uint32_t nonceLen)
Crypto, Authenticated Encryption with Symmetric key Verification Functions.
- **TEE_Result TEE_CipherUpdate** (**TEE_OperationHandle** operation, const void *srcData, uint32_t srcLen, void *destData, uint32_t *destLen)
Crypto, Authenticated Encryption with Symmetric key Verification Functions.
- **TEE_Result TEE_GenerateKey** (**TEE_ObjectHandle** object, uint32_t keySize, const **TEE_Attribute** *params, uint32_t paramCount)
Crypto, Asymmetric key Verification Functions.
- **TEE_Result TEE_AllocateTransientObject** (**TEE_ObjectType** objectType, uint32_t maxKeySize, **TEE_ObjectHandle** *object)
Crypto, Asymmetric key Verification Functions.
- void **TEE_InitRefAttribute** (**TEE_Attribute** *attr, uint32_t attributeID, const void *buffer, uint32_t length)
Crypto, Asymmetric key Verification Functions.
- void **TEE_InitValueAttribute** (**TEE_Attribute** *attr, uint32_t attributeID, uint32_t a, uint32_t b)
Crypto, Asymmetric key Verification Functions.
- void **TEE_FreeTransientObject** (**TEE_ObjectHandle** object)
Crypto, Asymmetric key Verification Functions.
- **TEE_Result TEE_AsymmetricSignDigest** (**TEE_OperationHandle** operation, const **TEE_Attribute** *params, uint32_t paramCount, const void *digest, uint32_t digestLen, void *signature, uint32_t *signatureLen)

Crypto, Asymmetric key Verification Functions.

- `TEE_Result TEE_AsymmetricVerifyDigest (TEE_OperationHandle operation, const TEE_Attribute *params, uint32_t paramCount, const void *digest, uint32_t digestLen, const void *signature, uint32_t signatureLen)`

Crypto, Asymmetric key Verification Functions.

10.7.1 Detailed Description

Candidate API list for Global Platform like RISC-V TEE.

draft RISC-V Internal TEE API

Author

Akira Tsukamoto, AIST

Date

2019/09/25

10.7.2 Function Documentation

10.7.2.1 `__attribute__((noret)) void __attribute__((noret))`

TEE.Panic() - Raises a panic in the Trusted Application instance.

When a Trusted Application calls the TEE.Panic function, the current instance shall be destroyed and all the resources opened by the instance shall be reclaimed. All sessions opened from the panicking instance on another TA shall be gracefully closed and all cryptographic objects and operations shall be closed properly.

Parameters

<i>code</i>	An informative panic code defined by the TA.
-------------	--

Returns

panic code will be returned.

TEE.Panic() - Raises a Panic in the Trusted Application instance

When a Trusted Application calls the TEE.Panic function, the current instance shall be destroyed and all the resources opened by the instance shall be reclaimed.

Parameters

<i>ec</i>	An informative panic code defined by the TA. May be displayed in traces if traces are available.
-----------	--

10.7.2.2 GetRelTimeEnd()

```
TEE_Result GetRelTimeEnd (
    uint64_t end )
```

Core Functions, Time Functions.

Return the elapsed.

[GetRelTimeEnd\(\)](#) - finds the real time of the end timing.

This function prints the ending time.

Parameters

<i>end</i>	End timing
------------	------------

Returns

0 If success

[GetRelTimeStart\(\)](#) - find the real time of the end timing.

This function prints the End timing.

Parameters

<i>end</i>	End timing
------------	------------

Returns

0 if success else error occurred

10.7.2.3 GetRelTimeStart()

```
TEE_Result GetRelTimeStart (
    uint64_t start )
```

Core Functions, Time Functions.

Fast relative Time function which guarantees no hart switch or context switch between Trusted and Untrusted sides.

Most of the time ending up writing similar functions when only measuring the relative time in usec resolution which do not require the quality of the time itself but the distance of the two points.
For the usage above, the function does not have to return wall clock time.
Not prepared in both Keystone and GP.

[GetRelTimeStart\(\)](#) - Gets the real time of the start timing.

This function prints the starting time.

Parameters

<i>start</i>	Start timing
--------------	--------------

Returns

0 on success

[GetRelTimeStart\(\)](#) - Gets the real time of the start timing.

This function prints the start timing.

Parameters

<i>start</i>	start timing
--------------	--------------

Returns

0 if success else error occurred.

10.7.2.4 TEE_AEDecryptFinal() `TEE_Result TEE_AEDecryptFinal (`
`TEE_OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen,`
`void * tag,`
`uint32_t tagLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CCM, TEE_ALG_AES_GCM.

[TEE_AEDecryptFinal\(\)](#) - Processes data that has not been processed by previous calls to TEE_AEUpdate as well as data supplied in srcData.

This function completes the AE operation and compares the computed tag with the tag supplied in the parameter tag. The operation handle can be reused or newly initialized. The buffers srcData and destData shall be either completely disjoint or equal in their starting positions. The operation may be in either initial or active state and enters initial state afterwards.

Parameters

<i>operation</i>	Handle of a running AE operation
<i>srcData</i>	Reference to final chunk of input data to be encrypted
<i>srcLen</i>	length of the input data
<i>destData</i>	Output buffer. Can be omitted if the output is to be discarded.
<i>destLen</i>	length of the buffer.
<i>tag</i>	Output buffer filled with the computed tag
<i>tagLen</i>	length of the tag.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER If the output buffer is not large enough to contain the output

TEE_ERROR_MAC_INVALID If the computed tag does not match the supplied tag

10.7.2.5 TEE_AEEncryptFinal() `TEE_Result TEE_AEEncryptFinal (`
`TEE_OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen,`
`void * tag,`
`uint32_t * tagLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CCM, TEE_ALG_AES_GCM.

[TEE_AEEncryptFinal\(\)](#) - processes data that has not been processed by previous calls to TEE_AEUpdate as well as data supplied in srcData .

TEE_AEEncryptFinal completes the AE operation and computes the tag. The operation handle can be reused or newly initialized. The buffers srcData and destData SHALL be either completely disjoint or equal in their starting positions. The operation may be in either initial or active state and enters initial state afterwards.

Parameters

<i>operation</i>	Handle of a running AE operation
<i>srcData</i>	Reference to final chunk of input data to be encrypted
<i>srcLen</i>	length of the input data
<i>destData</i>	Output buffer. Can be omitted if the output is to be discarded.
<i>destLen</i>	length of the buffer.
<i>tag</i>	Output buffer filled with the computed tag
<i>tagLen</i>	length of the tag.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER If the output or tag buffer is not large enough to contain the output.

10.7.2.6 TEE_AEInit() `TEE_Result TEE_AEInit (`
 `TEE_OperationHandle operation,`
 `const void * nonce,`
 `uint32_t nonceLen,`
 `uint32_t tagLen,`
 `uint32_t AADLen,`
 `uint32_t payloadLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CCM, TEE_ALG_AES_GCM.

[TEE_AEInit\(\)](#) - Initializes an Authentication Encryption operation.

The operation must be in initial state and remains in the initial state afterwards.

Parameters

<i>operation</i>	A handle on the operation.
<i>nonce</i>	The operation nonce or IV
<i>nonceLen</i>	length of nonce
<i>tagLen</i>	Size in bits of the tag
<i>AADLen</i>	Length in bytes of the AAD
<i>payloadLen</i>	Length in bytes of the payload.

Returns

0 on success.

TEE_ERROR_NOT_SUPPORTED If the tag length is not supported by the algorithm.

10.7.2.7 TEE_AEUpdate() `TEE_Result TEE_AEUpdate (`
 `TEE_OperationHandle operation,`
 `const void * srcData,`
 `uint32_t srcLen,`
 `void * destData,`
 `uint32_t * destLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CCM, TEE_ALG_AES_GCM.

[TEE_AEUpdate\(\)](#) - Accumulates data for an Authentication Encryption operation

This function describes Input data does not have to be a multiple of block size. Subsequent calls to this function are possible. Unless one or more calls of this function have supplied sufficient input data, no output is generated. when using this routine to decrypt the returned data may be corrupt since the integrity check is not performed until all the data has been processed. If this is a concern then only use the TEE_AEDecryptFinal routine.

Parameters

<i>operation</i>	Handle of a running AE operation.
<i>srcData</i>	Input data buffer to be encrypted or decrypted
<i>srcLen</i>	length of the input buffer.
<i>destData</i>	Output buffer
<i>destLen</i>	length of the out put buffer.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER if the output buffer is not large enough to contain the output.

10.7.2.8 TEE_AEUpdateAAD() void TEE_AEUpdateAAD (
 TEE_OperationHandle operation,
 const void * AADdata,
 uint32_t AADdataLen)

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CCM, TEE_ALG_AES_GCM.

[TEE_AEUpdateAAD\(\)](#) - Feeds a new chunk of Additional Authentication Data (AAD) to the AE operation. Subsequent calls to this function are possible.

The TEE_AEUpdateAAD function feeds a new chunk of Additional Authentication Data (AAD) to the AE operation. Subsequent calls to this function are possible. The buffers srcData and destData shall be either completely disjoint or equal in their starting positions. The operation SHALL be in initial state and remains in initial state afterwards.

Parameters

<i>operation</i>	Handle on the AE operation
<i>AADdata</i>	Input buffer containing the chunk of AAD
<i>AADdataLen</i>	length of the chunk of AAD.

10.7.2.9 TEE_AllocateOperation() TEE_Result TEE_AllocateOperation (
 TEE_OperationHandle * operation,
 uint32_t algorithm,
 uint32_t mode,
 uint32_t maxKeySize)

Crypto, for all Crypto Functions.

All Crypto Functions use TEE_OperationHandle* operation instances.
 Create Crypto instance.

[TEE_AllocateOperation\(\)](#) - Allocates a handle for a new cryptographic operation and sets the mode and algorithm type.

If this function does not return with TEE_SUCCESS then there is no valid handle value. Once a cryptographic operation has been created, the implementation shall guarantee that all resources necessary for the operation are allocated and that any operation with a key of at most maxKeySize bits can be performed. For algorithms that take multiple keys, for example the AES XTS algorithm, the maxKeySize parameter specifies the size of the largest key. It is up to the implementation to properly allocate space for multiple keys if the algorithm so requires.

Parameters

<i>operation</i>	reference to generated operation handle.
<i>algorithm</i>	One of the cipher algorithms.
<i>mode</i>	The operation mode.
<i>maxKeySize</i>	Maximum key size in bits for the operation.

Returns

0 in case of success

TEE_ERROR_OUT_OF_MEMORY If there are not enough resources to allocate the operation.

TEE_ERROR_NOT_SUPPORTED If the mode is not compatible with the algorithm or key size or if the algorithm is not one of the listed algorithms or if maxKeySize is not appropriate for the algorithm.

10.7.2.10 TEE_AllocateTransientObject() `TEE_Result TEE_AllocateTransientObject (`
`TEE_ObjectType objectType,`
`uint32_t maxKeySize,`
`TEE_ObjectHandle * object)`

Crypto, Asymmetric key Verification Functions.

Create object storing asymmetric key.

[TEE_AllocateTransientObject\(\)](#) - Allocates an uninitialized transient object. Transient objects are used to hold a cryptographic object (key or key-pair).

The value TEE.KEYSIZE.NO_KEY should be used for maxObjectSize for object types that do not require a key so that all the container resources can be pre-allocated. As allocated, the container is uninitialized. It can be initialized by subsequently importing the object material, generating an object, deriving an object, or loading an object from the Trusted Storage.

Parameters

<i>objectType</i>	Type of uninitialized object container to be created
<i>maxKeySize</i>	Key Size of the object.
<i>object</i>	Filled with a handle on the newly created key container.

Returns

0 on success

TEE_ERROR_OUT_OF_MEMORY If not enough resources are available to allocate the object handle.

TEE_ERROR_NOT_SUPPORTED If the key size is not supported or the object type is not supported.

10.7.2.11 TEE_AsymmetricSignDigest() `TEE_Result TEE_AsymmetricSignDigest (`
`TEE.OperationHandle operation,`
`const TEE.Attribute * params,`
`uint32_t paramCount,`
`const void * digest,`
`uint32_t digestLen,`
`void * signature,`
`uint32_t * signatureLen)`

Crypto, Asymmetric key Verification Functions.

Sign a message digest within an asymmetric key operation.

Keystone has `ed25519_sign()`.

Equivalent in openssl is `EVP_DigestSign()`.

[TEE_AsymmetricSignDigest\(\)](#) - Signs a message digest within an asymmetric operation.

Parameters

<i>operation</i>	Handle on the operation, which SHALL have been suitably set up with an operation key.
<i>params</i>	Optional operation parameters
<i>paramCount</i>	size of param
<i>digest</i>	Input buffer containing the input message digest
<i>digestLen</i>	length of input buffer.
<i>signature</i>	Output buffer written with the signature of the digest
<i>signatureLen</i>	length of output buffer.

Returns

0 on success

TEE_ERROR_SHORT_BUFFER If the signature buffer is not large enough to hold the result

10.7.2.12 TEE_AsymmetricVerifyDigest() `TEE_Result TEE_AsymmetricVerifyDigest (`
`TEE.OperationHandle operation,`
`const TEE.Attribute * params,`
`uint32_t paramCount,`
`const void * digest,`
`uint32_t digestLen,`

```
const void * signature,
uint32_t signatureLen )
```

Crypto, Asymmetric key Verification Functions.

Verifies a message digest signature within an asymmetric key operation.

Keystone has `ed25519_verify()`.

Equivalent in openssl is `EVP_DigestVerify()`.

[TEE_AsymmetricVerifyDigest\(\)](#) - verifies a message digest signature within an asymmetric operation.

This function describes the message digest signature verify by calling `ed25519_verify()`.

Parameters

<i>operation</i>	Handle on the operation, which SHALL have been suitably set up with an operation key.
<i>params</i>	Optional operation parameters
<i>paramCount</i>	size of param.
<i>digest</i>	Input buffer containing the input message digest
<i>digestLen</i>	length of input buffer.
<i>signature</i>	Output buffer written with the signature of the digest
<i>signatureLen</i>	length of output buffer.

Returns

TEE_SUCCESS on success

TEE_ERROR_SIGNATURE_INVALID if the signature is invalid.

10.7.2.13 TEE_CipherInit() `void TEE_CipherInit (`
`TEE_OperationHandle operation,`
`const void * nonce,`
`uint32_t nonceLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CBC.

[TEE_CipherInit\(\)](#) - starts the symmetric cipher operation.

The operation shall have been associated with a key. If the operation is in active state, it is reset and then initialized. If the operation is in initial state, it is moved to active state.

Parameters

<i>operation</i>	A handle on an opened cipher operation setup with a key
<i>nonce</i>	Buffer containing the operation Initialization Vector as appropriate.
<i>nonceLen</i>	length of the buffer

10.7.2.14 TEE_CipherUpdate() `TEE.Result` TEE_CipherUpdate (
 `TEE.OperationHandle` operation,
 const void * srcData,
 uint32_t srcLen,
 void * destData,
 uint32_t * destLen)

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Supports TEE_ALG_AES_CBC.

`TEE_CipherUpdate()` - encrypts or decrypts input data.

Input data does not have to be a multiple of block size. Subsequent calls to this function are possible. Unless one or more calls of this function have supplied sufficient input data, no output is generated. The cipher operation is finalized with a call to `TEE_CipherDoFinal`. The buffers `srcData` and `destData` SHALL be either completely disjoint or equal in their starting positions. The operation SHALL be in active state.

Parameters

<i>operation</i>	Handle of a running Cipher operation
<i>srcData</i>	Input data buffer to be encrypted or decrypted
<i>srcLen</i>	length of input buffer
<i>destData</i>	output buffer
<i>destLen</i>	output buffer length.

Returns

0 on success else

TEE_ERROR_SHORT_BUFFER If the output buffer is not large enough to contain the output. In this case, the input is not fed into the algorithm.

10.7.2.15 TEE_CloseObject() void TEE_CloseObject (
 `TEE.ObjectHandle` object)

Core Functions, Secure Storage Functions (data is isolated for each TA)

Destroy object (key, key-pair or Data).

`TEE_CloseObject()` - Closes an opened object handle.

The object can be persistent or transient. For transient objects, `TEE_CloseObject` is equivalent to `TEE_FreeTransientObject`.

Parameters

<i>object</i>	Handle of the object.
---------------	-----------------------

Returns

TEE_SUCCESS if success else error occurred.

[TEE_CloseObject\(\)](#) - Function closes an opened object handle.

The object can be persistent or transient. For transient objects, TEE_CloseObject is equivalent to TEE_Free↔ TransientObject.

Parameters

<i>object</i>	Handle of the object
---------------	----------------------

Returns

TEE_SUCCESS if success else error occurred.

10.7.2.16 TEE_CreatePersistentObject() `TEE_Result TEE_CreatePersistentObject (`
`uint32_t storageID,`
`const void * objectID,`
`uint32_t objectIDLen,`
`uint32_t flags,`
`TEE_ObjectHandle attributes,`
`const void * initialData,`
`uint32_t initialDataLen,`
`TEE_ObjectHandle * object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

Create persistent object (key, key-pair or Data).

For the people who have not written code on GP then probably do not need to care the meaning of what is Persistent Object is, since the following are enough to use secure storage feature.

[TEE_CreatePersistentObject\(\)](#) - Creates a persistent object with initial attributes.

In this function an initial data stream content returns either a handle on the created object or TEE_HANDLE_NULL upon failure.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
Paramter list continued on next page	

<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>attributes</i>	A handle on a persistent object or an initialized transient object from which to take the persistent object attributes
<i>initialData</i>	The initial data content of the persistent object
<i>initialDataLen</i>	The initial data content of the persistent object
<i>object</i>	A pointer to the handle which contains the opened handle upon successful completion

Returns

0 if success else error occurred.

[TEE.CreatePersistentObject\(\)](#) - Creates a persistent object with initial attributes.

An initial data stream content, and optionally returns either a handle on the created object, or TEE_HANDLE_NULL upon failure.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>attributes</i>	A handle on a persistent object or an initialized transient object from which to take the persistent object attributes
<i>initialData</i>	The initial data content of the persistent object
<i>initialDataLen</i>	The initial data content of the persistent object
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success, else error occurred.

10.7.2.17 TEE_DigestDoFinal() `TEE_Result TEE_DigestDoFinal (`
`TEE.OperationHandle operation,`
`const void * chunk,`
`uint32_t chunkLen,`
`void * hash,`
`uint32_t * hashLen)`

Function accumulates message data for hashing.

[TEE.DigestDoFinal\(\)](#) - Finalizes the message digest operation and produces the message hash.

This function finalizes the message digest operation and produces the message hash. Afterwards the Message Digest operation is reset to initial state and can be reused.

Parameters

<i>operation</i>	Handle of a running Message Digest operation.
<i>chunk</i>	Chunk of data to be hashed.
<i>chunkLen</i>	size of the chunk.
<i>hash</i>	Output buffer filled with the message hash.
<i>hashLen</i>	length of the message hash.

Returns

0 on success

TEE_ERROR_SHORT_BUFFER If the output buffer is too small. In this case, the operation is not finalized.

10.7.2.18 TEE.DigestUpdate() void TEE.DigestUpdate (
 TEE.OperationHandle operation,
 const void * chunk,
 uint32_t chunkSize)

Crypto, Message Digest Functions.

Function accumulates message data for hashing.

[TEE.DigestUpdate\(\)](#)- Accumulates message data for hashing.

This function describes the message does not have to be block aligned. Subsequent calls to this function are possible. The operation may be in either initial or active state and becomes active.

Parameters

<i>operation</i>	Handle of a running Message Digest operation.
<i>chunk</i>	Chunk of data to be hashed
<i>chunkSize</i>	size of the chunk.

10.7.2.19 TEE.FreeOperation() void TEE.FreeOperation (
 TEE.OperationHandle operation)

Crypto, for all Crypto Functions.

All Crypto Functions use TEE.OperationHandle* operation instances.

Destroy Crypto instance.

[TEE.FreeOperation\(\)](#) - Deallocates all resources associated with an operation handle.

This function deallocates all resources associated with an operation handle. After this function is called, the operation handle is no longer valid. All cryptographic material in the operation is destroyed. The function does nothing if operation is TEE_HANDLE_NULL.

Parameters

<i>operation</i>	Reference to operation handle.
------------------	--------------------------------

Returns

nothing after the operation free.

10.7.2.20 TEE_FreeTransientObject() `void TEE_FreeTransientObject (TEE_ObjectHandle object)`

Crypto, Asymmetric key Verification Functions.

Destroy object storing asymmetric key.

[TEE_FreeTransientObject\(\)](#) - Deallocates a transient object previously allocated with [TEE_AllocateTransientObject](#) .

this function describes the object handle is no longer valid and all resources associated with the transient object shall have been reclaimed after the [TEE_AllocateTransientObject\(\)](#) call.

Parameters

<i>object</i>	Handle on the object to free.
---------------	-------------------------------

10.7.2.21 TEE_GenerateKey() `TEE_Result TEE_GenerateKey (TEE_ObjectHandle object, uint32_t keySize, const TEE_Attribute * params, uint32_t paramCount)`

Crypto, Asymmetric key Verification Functions.

Generate asymmetric keypair.

[TEE_GenerateKey \(\)](#) - Generates a random key or a key-pair and populates a transient key object with the generated key material.

The size of the desired key is passed in the keySize parameter and shall be less than or equal to the maximum key size specified when the transient object was created.

Parameters

<i>object</i>	Handle on an uninitialized transient key to populate with the generated key.
Paramter list continued on next page	

<i>keySize</i>	Requested key size shall be less than or equal to the maximum key size specified when the object container was created
<i>params</i>	Parameters for the key generation.
<i>paramCount</i>	The values of all parameters are copied into the object so that the params array and all the memory buffers it points to may be freed after this routine returns without affecting the object.

Returns

0 on success

TEE_ERROR_BAD_PARAMETERS If an incorrect or inconsistent attribute is detected. The checks that are performed depend on the implementation.

10.7.2.22 TEE_GenerateRandom() void TEE_GenerateRandom (
 void * *randomBuffer*,
 uint32_t *randomBufferLen*)

Crypto, common.

Random Data Generation Function. The quality of the random is implementation dependent.

I am not sure this should be in Keystone or not, but it is very handy.

Good to have adding a way to check the quality of the random implementation.

[TEE_GenerateRandom\(\)](#) - Generates random data.

This function generates random data of random buffer length and is stored in to random Buffer by calling wc.RNG↔
_GenerateBlock(). If ret is not equal
to 0 then TEE_Panic is called.

Parameters

<i>randomBuffer</i>	Reference to generated random data
<i>randomBufferLen</i>	Byte length of requested random data

Returns

random data random data will be returned.

[TEE_GenerateRandom\(\)](#) - Generates random data.

This function generates random data of random bufferlength and is stored in to randomBuffer by calling sgx.read↔
_rand().

Parameters

<i>randomBuffer</i>	Reference to generated random data
<i>randomBufferLen</i>	Byte length of requested random data

10.7.2.23 TEE_GetObjectInfo1() `TEE_Result TEE_GetObjectInfo1 (`
`TEE_ObjectHandle object,`
`TEE_ObjectInfo * objectInfo)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

Get length of object required before reading the object.

[TEE_GetObjectInfo1\(\)](#) - Returns the characteristics of an object.

This function returns a handle which can be used to access the object's attributes and data stream.

Parameters

<i>objectInfo</i>	Pointer to a structure filled with the object information
<i>object</i>	Handle of the object

Returns

0 if success else error occurred.

[TEE_GetObjectInfo1\(\)](#) - Function returns the characteristics of an object.

It returns a handle that can be used to access the object's attributes and data stream.

Parameters

<i>objectInfo</i>	Pointer to a structure filled with the object information
<i>object</i>	Handle of the object

Returns

0 if success else error occurred.

10.7.2.24 TEE_GetREETime() `void TEE_GetREETime (`
`TEE_Time * time)`

Core Functions, Time Functions.

Wall clock time of host OS, expressed in the number of seconds since 1970-01-01 UTC.
This could be implemented on Keystone using ocall.

[TEE_GetREETime\(\)](#) - Retrieves the current REE system time.

This function retrieves the current time as seen from the point of view of the REE.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds
-------------	--

[TEE_GetREETime\(\)](#) - Function retrieves the current REE system time.

This function retrieves the current time as seen from the point of view of the REE.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds.
-------------	---

10.7.2.25 TEE_GetSystemTime() `void TEE_GetSystemTime (`
 `TEE_Time * time)`

Core Functions, Time Functions.

Time of TEE-controlled secure timer or Host OS time, implementation dependent.

[TEE_GetSystemTime\(\)](#) - Retrieves the current system time.

This function describes the system time has an arbitrary implementation defined origin that can vary across TA instances. The minimum guarantee is that the system time shall be monotonic for a given TA instance.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds
-------------	--

[TEE_GetSystemTime\(\)](#) - Retrieves the current system time.

The system time has an arbitrary implementation-defined origin that can vary across TA instances

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds.
-------------	---

10.7.2.26 TEE_InitRefAttribute() `void TEE_InitRefAttribute (`
 `TEE_Attribute * attr,`
 `uint32_t attributeID,`

```
const void * buffer,
uint32_t length )
```

Crypto, Asymmetric key Verification Functions.

Storing asymmetric key.

[TEE_InitRefAttribute\(\)](#) - The helper function can be used to populate a single attribute either with a reference to a buffer or with integer values.

In `TEE_InitRefAttribute()` only the buffer pointer is copied, not the content of the buffer. This means that the attribute structure maintains a pointer back to the supplied buffer. It is the responsibility of the TA author to ensure that the contents of the buffer maintain their value until the attributes array is no longer in use.

Parameters

<i>attr</i>	attribute structure to initialize.
<i>attributeID</i>	Identifier of the attribute to populate.
<i>buffer</i>	input buffer that holds the content of the attribute.
<i>length</i>	buffer length.

10.7.2.27 TEE_InitValueAttribute() `void TEE_InitValueAttribute (`
`TEE_Attribute * attr,`
`uint32_t attributeID,`
`uint32_t a,`
`uint32_t b)`

Crypto, Asymmetric key Verification Functions.

Storing asymmetric key.

[TEE_InitValueAttribute\(\)](#) - The helper function can be used to populate a single attribute either with a reference to a buffer or with integer values.

Parameters

<i>attr</i>	attribute structure to initialize.
<i>attributeID</i>	Identifier of the attribute to populate.
<i>a</i>	unsigned integer value to assign to the a member of the attribute structure.
<i>b</i>	unsigned integer value to assign to the b member of the attribute structure

10.7.2.28 TEE_OpenPersistentObject() `TEE_Result TEE_OpenPersistentObject (`
`uint32_t storageID,`
`const void * objectID,`
`uint32_t objectIDLen,`

```
uint32_t flags,
TEE_ObjectHandle * object )
```

Core Functions, Secure Storage Functions (data is isolated for each TA)

Open persistent object.

[TEE_OpenPersistentObject\(\)](#) - Opens a handle on an existing persistent object.

This function returns a handle which can be used to access the object's attributes and data stream.

Parameters

<i>storageID</i>	The storage to use
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success else error occurred.

[TEE_OpenPersistentObject\(\)](#) - Opens a handle on an existing persistent object.

This function returns a handle that can be used to access the object's attributes and data stream.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success, else error occurred.

10.7.2.29 TEE_ReadObjectData() [TEE_Result](#) TEE_ReadObjectData (
[TEE_ObjectHandle](#) object,
void * buffer,
uint32_t size,
uint32_t * count)

Core Functions, Secure Storage Functions (data is isolated for each TA)

Read object.

[TEE_ReadObjectData\(\)](#) - Attempts to read size bytes from the data stream associated with the object into the buffer pointed to by buffer.

The bytes are read starting at the position in the data stream currently stored in the object handle. The handle's position is incremented by the number of bytes actually read. On completion of TEE_ReadObjectData sets the number of bytes actually read in the "uint32_t" pointed to by count. The value written to *count may be less than size if the number of bytes until the end-of-stream is less than size. It is set to 0 if the position at the start of the read operation is at or beyond the end-of-stream. These are the only cases where *count may be less than size.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write
<i>count</i>	size of the buffer.

Returns

TEE_SUCCESS if success else error occurred.

[TEE_ReadObjectData\(\)](#) - Attempts to read size bytes from the data stream associated with the object object into the buffer pointed to by buffer.

The bytes are read starting at the position in the data stream currently stored in the object handle. The handle's position is incremented by the number of bytes actually read. On completion TEE_ReadObjectData sets the number of bytes actually read in the uint32_t pointed to by count. The value written to *count may be less than size if the number of bytes until the end-of-stream is less than size. It is set to 0 if the position at the start of the read operation is at or beyond the end-of-stream. These are the only cases where *count may be less than size.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write
<i>count</i>	size of the buffer.

Returns

TEE_SUCCESS if success, else error occurred.

10.7.2.30 TEE_SetOperationKey() [TEE_Result](#) TEE_SetOperationKey (
[TEE_OperationHandle](#) operation,
[TEE_ObjectHandle](#) key)

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

Set symmetric key used in operation.

[TEE_SetOperationKey\(\)](#) - Programs the key of an operation; that is, it associates an operation with a key.

The key material is copied from the key object handle into the operation. After the key has been set, there is no longer any link between the operation and the key object. The object handle can be closed or reset and this will not affect the operation. This copied material exists until the operation is freed using [TEE_FreeOperation](#) or another key is set into the operation.

Parameters

<i>operation</i>	Operation handle.
<i>key</i>	A handle on a key object.

Returns

0 on success return

[TEE_ERROR_CORRUPT_OBJECT](#) If the object is corrupt. The object handle is closed.

[TEE_ERROR_STORAGE_NOT_AVAILABLE](#) If the persistent object is stored in a storage area which is currently inaccessible.

10.7.2.31 TEE_WriteObjectData() [TEE_Result](#) [TEE_WriteObjectData](#) (
[TEE_ObjectHandle](#) *object*,
 const void * *buffer*,
 uint32_t *size*)

Core Functions, Secure Storage Functions (data is isolated for each TA)

Write object.

[TEE_WriteObjectData\(\)](#) - Writes the buffer data in to persistent objects.

In this function it checks if object is present or not, the encryption/ decryption buffer is taken by calling [mbedtls_aes_crypt_cbc\(\)](#) then that buffer data is encrypted and mapped to object. On the base of object creation [TEE_SUCCESS](#) appears else [TEE_ERROR_GENERIC](#) appears.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write

Returns

[TEE_SUCCESS](#) if success else error occurred.

[TEE_WriteObjectData\(\)](#) - writes size bytes from the buffer pointed to by buffer to the data stream associated with the open object handle object.

If the current data position points before the end-of-stream, then size bytes are written to the data stream, overwriting bytes starting at the current data position. If the current data position points beyond the stream's end, then the data stream is first extended with zero bytes until the length indicated by the data position indicator is reached, and then size bytes are written to the stream.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write

Returns

TEE_SUCCESS if success else error occurred.

10.15.1 Typedef Documentation

10.15.1.1 TEEC.Result `typedef uint32_t TEEC.Result`

10.15.2 Function Documentation

10.15.2.1 TEEC.AllocateSharedMemory() `TEEC.Result TEEC.AllocateSharedMemory (`
 `TEEC.Context * context,`
 `TEEC.SharedMemory * sharedMem)`

[TEEC.AllocateSharedMemory\(\)](#) - Allocate shared memory for TEE.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>sharedMem</i>	Pointer to the allocated shared memory.

Returns

TEEC.SUCCESS The registration was successful.
TEEC.ERROR_OUT_OF_MEMORY Memory exhaustion.
TEEC.Result Something failed.

10.15.2.2 TEEC.CloseSession() `void TEEC.CloseSession (`
 `TEEC.Session * session)`

[TEEC.CloseSession\(\)](#) - Closes the session which has been opened with the specific trusted application.

Parameters

<i>session</i>	The opened session to close.
----------------	------------------------------

10.15.2.3 TEEC.FinalizeContext() `void TEEC.FinalizeContext (`
 `TEEC.Context * context)`

[TEEC.FinalizeContext\(\)](#) - Destroys a context holding connection information on the specific TEE.

This function destroys an initialized TEE context, closing the connection between the client application and the TEE. This function must only be called when all sessions related to this TEE context have been closed and all shared memory blocks have been released.

Parameters

<i>context</i>	The context to be destroyed.
----------------	------------------------------

[TEEC.FinalizeContext\(\)](#) - Destroys a context holding connection information on the specific TEE.

This function finalizes an initialized TEE context, closing the connection between the client application and the TEE. This function must only be called when all sessions related to this TEE context have been closed and all shared memory blocks have been released.

Parameters

<i>context</i>	The context to be finalized.
----------------	------------------------------

10.15.2.4 TEEC.InitializeContext() `TEEC.Result` TEEC.InitializeContext (
 const char * name,
 TEEC.Context * context)

[TEEC.InitializeContext\(\)](#) - Initializes a context holding connection information on the specific TEE, designated by the name string.

Parameters

<i>name</i>	A zero-terminated string identifying the TEE to connect to. If name is set to NULL, the default TEE is connected to. NULL is the only supported value in this version of the API implementation.
<i>context</i>	The context structure which is to be initialized.

Returns

TEEC.SUCCESS The initialization was successful.

TEEC.Result Something failed.

10.15.2.5 TEEC.InvokeCommand() `TEEC.Result` TEEC.InvokeCommand (
 TEEC.Session * session,
 uint32_t commandID,
 TEEC.Operation * operation,
 uint32_t * returnOrigin)

[TEEC.InvokeCommand\(\)](#) - Executes a command in the specified trusted application.

Parameters

<i>session</i>	A handle to an open connection to the trusted application.
<i>commandID</i>	Identifier of the command in the trusted application to invoke.
<i>operation</i>	An operation structure to use in the invoke command. May be set to NULL to signify no operation structure needed.
<i>returnOrigin</i>	A parameter which will hold the error origin if this function returns any value other than TEEC_SUCCESS.

Returns

TEEC_SUCCESS OpenSession successfully opened a new session.

TEEC.Result Something failed.

10.15.2.6 TEEC_OpenSession() `TEEC_Result TEEC_OpenSession (`

```

    TEEC_Context * context,
    TEEC_Session * session,
    const TEEC_UUID * destination,
    uint32_t connectionMethod,
    const void * connectionData,
    TEEC_Operation * operation,
    uint32_t * returnOrigin )

```

`TEEC_OpenSession()` - Opens a new session with the specified trusted application.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>session</i>	The session to initialize.
<i>destination</i>	A structure identifying the trusted application with which to open a session.
<i>connectionMethod</i>	The connection method to use.
<i>connectionData</i>	Any data necessary to connect with the chosen connection method. Not supported, should be set to NULL.
<i>operation</i>	An operation structure to use in the session. May be set to NULL to signify no operation structure needed.
<i>returnOrigin</i>	A parameter which will hold the error origin if this function returns any value other than TEEC_SUCCESS.

Returns

TEEC_SUCCESS OpenSession successfully opened a new session.

TEEC.Result Something failed.

10.15.2.7 TEEC.RegisterSharedMemory() `TEEC.Result TEEC_RegisterSharedMemory (`
`TEEC.Context * context,`
`TEEC.SharedMemory * sharedMem)`

[TEEC.RegisterSharedMemory\(\)](#) - Register a block of existing memory as a shared block within the scope of the specified context.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>sharedMem</i>	pointer to the shared memory structure to register.

Returns

TEEC_SUCCESS The registration was successful.
TEEC_ERROR_OUT_OF_MEMORY Memory exhaustion.
TEEC_Result Something failed.

10.15.2.8 TEEC.ReleaseSharedMemory() `void TEEC_ReleaseSharedMemory (`
`TEEC.SharedMemory * sharedMemory)`

[TEEC.ReleaseSharedMemory\(\)](#) - Free or deregister the shared memory.

Parameters

<i>sharedMem</i>	Pointer to the shared memory to be freed.
------------------	---

10.15.2.9 TEEC.RequestCancellation() `void TEEC_RequestCancellation (`
`TEEC.Operation * operation)`

[TEEC.RequestCancellation\(\)](#) - Request the cancellation of a pending open session or command invocation.

Parameters

<i>operation</i>	Pointer to an operation previously passed to open session or invoke.
------------------	--

41  * TA Interface
42  *
43  * Each Trusted Application must provide the Implementation with a number
44  * of functions, collectively called the \TA interface". These functions
45  * are the entry points called by the Trusted Core Framework to create the
46  * instance, notify the instance that a new client is connecting, notify
47  * the instance when the client invokes a command, etc.
48  *
49  * Trusted Application Entry Points:
50  */
51
52 /*
53  * The function TA_CreateEntryPoint is the Trusted Application's
54  * constructor, which the Framework calls when it creates a new instance of
55  * the Trusted Application. To register instance data, the implementation
56  * of this constructor can use either global variables or the function
57  * TEE_InstanceSetData.
58  *
59  * Return Value:
60  * - TEE_SUCCESS: if the instance is successfully created, the function
61  * must return TEE_SUCCESS.
62  * - Any other value: if any other code is returned the instance is not
63  * created, and no other entry points of this instance will be called.
64  * The Framework MUST reclaim all resources and dereference all objects
65  * related to the creation of the instance.
66  *
67  * If this entry point was called as a result of a client opening a
68  * session, the error code is returned to the client and the session is
69  * not opened.
70  */
71 TEE_Result TA_EXPORT TA_CreateEntryPoint(void);

```

```

72
73 /*
74 * The function TA_DestroyEntryPoint is the Trusted Applications
75 * destructor, which the Framework calls when the instance is being
76 * destroyed.
77 *
78 * When the function TA_DestroyEntryPoint is called, the Framework
79 * guarantees that no client session is currently open. Once the call to
80 * TA_DestroyEntryPoint has been completed, no other entry point of this
81 * instance will ever be called.
82 *
83 * Note that when this function is called, all resources opened by the
84 * instance are still available. It is only after the function returns that
85 * the Implementation MUST start automatically reclaiming resources left
86 * opened.
87 *
88 * Return Value:
89 * This function can return no success or error code. After this function
90 * returns the Implementation MUST consider the instance destroyed and
91 * reclaims all resources left open by the instance.
92 */
93 void TA_EXPORT TA_DestroyEntryPoint(void);
94
95 /*
96 * The Framework calls the function TA_OpenSessionEntryPoint when a client
97 * requests to open a session with the Trusted Application. The open
98 * session request may result in a new Trusted Application instance being
99 * created as defined in section 4.5.
100 *
101 * The client can specify parameters in an open operation which are passed
102 * to the Trusted Application instance in the arguments paramTypes and
103 * params. These arguments can also be used by the Trusted Application
104 * instance to transfer response data back to the client. See section 4.3.6
105 * for a specification of how to handle the operation parameters.
106 *
107 * If this function returns TEE_SUCCESS, the client is connected to a
108 * Trusted Application instance and can invoke Trusted Application
109 * commands. When the client disconnects, the Framework will eventually
110 * call the TA_CloseSessionEntryPoint entry point.
111 *
112 * If the function returns any error, the Framework rejects the connection
113 * and returns the error code and the current content of the parameters the
114 * client. The return origin is then set to TEE_ORIGIN_TRUSTED_APP.
115 *
116 * The Trusted Application instance can register a session data pointer by
117 * setting *sessionContext. The value of this pointer is not interpreted
118 * by the Framework, and is simply passed back to other TA functions
119 * within this session. Note that *sessionContext may be set with a pointer
120 * to a memory allocated by the Trusted Application instance or with
121 * anything else, like an integer, a handle etc. The Framework will not
122 * automatically free *sessionContext when the session is closed; the
123 * Trusted Application instance is responsible for freeing memory if
124 * required.
125 *
126 * During the call to TA_OpenSessionEntryPoint the client may request to
127 * cancel the operation. See section 4.10 for more details on
128 * cancellations. If the call to TA_OpenSessionEntryPoint returns
129 * TEE_SUCCESS, the client must consider the session as successfully opened
130 * and explicitly close it if necessary.
131 *
132 * Parameters:
133 * - paramTypes: the types of the four parameters.
134 * - params: a pointer to an array of four parameters.
135 * - sessionContext: A pointer to a variable that can be filled by the
136 *   Trusted Application instance with an opaque void* data pointer
137 *
138 * Return Value:
139 * - TEE_SUCCESS if the session is successfully opened.
140 * - Any other value if the session could not be open.
141 *   o The error code may be one of the pre-defined codes, or may be a new
142 *     error code defined by the Trusted Application implementation itself.
143 */
144 TEE_Result TA_EXPORT TA_OpenSessionEntryPoint(uint32_t paramTypes,
145        TEE_Param params[TEE_NUM_PARAMS],
146        void **sessionContext);
147
148 /*
149 * The Framework calls this function to close a client session. During the
150 * call to this function the implementation can use any session functions.
151 *
152 * The Trusted Application implementation is responsible for freeing any
153 * resources consumed by the session being closed. Note that the Trusted
154 * Application cannot refuse to close a session, but can hold the closing
155 * until it returns from TA_CloseSessionEntryPoint. This is why this
156 * function cannot return an error code.

```

```

157 *
158 * Parameters:
159 * - sessionContext: The value of the void* opaque data pointer set by the
160 *   Trusted Application in the function TA.OpenSessionEntryPoint for this
161 *   session.
162 */
163 void TA_EXPORT TA.CloseSessionEntryPoint(void *sessionContext);
164
165 /*
166 * The Framework calls this function when the client invokes a command
167 * within the given session.
168 *
169 * The Trusted Application can access the parameters sent by the client
170 * through the paramTypes and params arguments. It can also use these
171 * arguments to transfer response data back to the client.
172 *
173 * During the call to TA.InvokeCommandEntryPoint the client may request to
174 * cancel the operation.
175 *
176 * A command is always invoked within the context of a client session.
177 * Thus, any session function can be called by the command implementation.
178 *
179 * Parameter:
180 * - sessionContext: The value of the void* opaque data pointer set by the
181 *   Trusted Application in the function TA.OpenSessionEntryPoint.
182 * - commandID: A Trusted Application-specific code that identifies the
183 *   command to be invoked.
184 * - paramTypes: the types of the four parameters.
185 * - params: a pointer to an array of four parameters.
186 *
187 * Return Value:
188 * - TEE.SUCCESS: if the command is successfully executed, the function
189 *   must return this value.

191 *   reason.
192 *   o The error code may be one of the pre-defined codes, or may be a new
193 *     error code defined by the Trusted Application implementation itself.
194 */
195
196 TEE_Result TA_EXPORT TA.InvokeCommandEntryPoint(void *sessionContext,
197         uint32_t commandID,
198         uint32_t paramTypes,
199         TEE_Param params[TEE_NUM_PARAMS]);
200
201 /*
202 * Correspondance Client Functions <--> TA Functions
203 *
204 * TEE.OpenSession or TEE.OpenTASession:
205 * If a new Trusted Application instance is needed to handle the session,
206 * TA.CreateEntryPoint is called.
207 * Then, TA.OpenSessionEntryPoint is called.
208 *
209 *
210 * TEE.InvokeCommand or TEE.InvokeTACommand:
211 * TA.InvokeCommandEntryPoint is called.
212 *
213 *
214 * TEE.CloseSession or TEE.CloseTASession:
215 * TA.CloseSessionEntryPoint is called.
216 * For a multi-instance TA or for a single-instance, non keep-alive TA, if
217 * the session closed was the last session on the instance, then
218 * TA.DestroyEntryPoint is called. Otherwise, the instance is kept until
219 * the TEE shuts down.
220 *
221 */

Functions

- void `__attribute__((noreturn))`

10.29.1 Function Documentation

10.29.1.1 `__attribute__((noret)) void __attribute__((noret))`

TEE.Panic() - Raises a panic in the Trusted Application instance.

When a Trusted Application calls the TEE.Panic function, the current instance shall be destroyed and all the resources opened by the instance shall be reclaimed. All sessions opened from the panicking instance on another TA shall be gracefully closed and all cryptographic objects and operations shall be closed properly.

Parameters

<i>code</i>	An informative panic code defined by the TA.
-------------	--

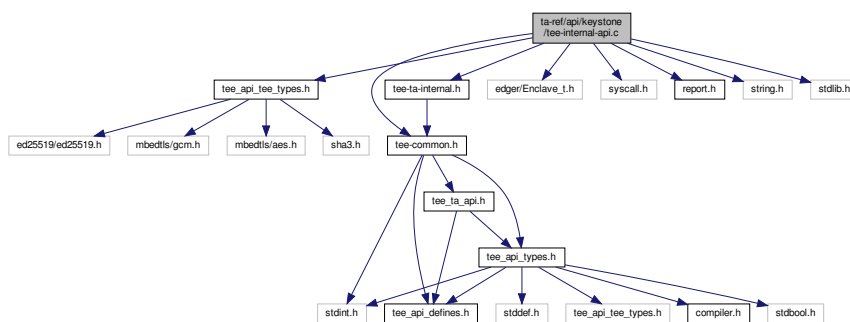

Returns

panic code will be returned.

10.30.1 Function Documentation

10.30.1.1 flags2flags() static int flags2flags (
int flags) [inline], [static]

[flags2flags\(\)](#) - Checks the status for reading or writing of the file operational.

This function is used to check the status for reading or writing of the file operational.

Parameters

<i>flags</i>	Flags of the referencing node.
--------------	--------------------------------

Returns

ret if success.

10.30.1.2 get_wc_rng() WC_RNG * get_wc_rng (
void)

[get_wc_rng\(\)](#) - Gets the seed (from OS) and key cipher for rng (random number genertor).

This function returns the random number or unique number of "rngstr".

Returns

random number if success else error occurred.

10.30.1.3 GetRelTimeEnd() TEE_Result GetRelTimeEnd (
uint64_t end)

Core Functions, Time Functions.

[GetRelTimeEnd\(\)](#) - finds the real time of the end timing.

This function prints the ending time.

Parameters

<i>end</i>	End timing
------------	------------

Returns

0 If success

10.30.1.4 GetRelTimeStart() TEE_Result GetRelTimeStart (
uint64_t start)

Core Functions, Time Functions.

[GetRelTimeStart\(\)](#) - Gets the real time of the start timing.

This function prints the starting time.

Parameters

<i>start</i>	Start timing
--------------	--------------

Returns

0 on success

10.30.1.5 OpenPersistentObject() static `TEE_Result` OpenPersistentObject (
 uint32_t *storageID*,
 const void * *objectID*,
 uint32_t *objectIDLen*,
 uint32_t *flags*,
 TEE_ObjectHandle * *object*,
 int *ocreat*) [static]

[OpenPersistentObject\(\)](#) - Opens a handle on an existing persistent object.

The flags parameter is a set of flags that controls the access rights and sharing permissions with which the object handle is opened. The value of the flags parameter is constructed by a bitwise-inclusive OR of flags TEE_DATA_FLAG_ACCESS_READ, the object is opened with the read access right. This allows the Trusted Application to call the function TEE_ReadObjectData. TEE_DATA_FLAG_ACCESS_WRITE, the object is opened with the write access right. TEE_DATA_FLAG_ACCESS_WRITE_META, the object is opened with the write-meta access right.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	length of the identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion.

Returns

0 if success else error occurred.

10.30.1.6 set_object_key() static int set_object_key (
 void * *id*,
 unsigned int *idlen*,
 TEE_ObjectHandle *object*) [static]

[set_object_key\(\)](#) - Initialize report and then attest enclave with file.

This function describes the initialization of report, attest the enclave with file id and its length then assigned to ret. Based on "mbedtls" key encryption and decryption position of the object will be copied. Finally ret value returns on success else signature too short error will appear on failure.

Parameters

<i>id</i>	id of the object.
<i>idlen</i>	length of the id.
<i>object</i>	TEE_ObjectHandle type handle.

Returns

ret if success.

10.30.1.7 TEE_CloseObject() `void TEE_CloseObject (`
`TEE_ObjectHandle object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_CloseObject\(\)](#) - Closes an opened object handle.

The object can be persistent or transient. For transient objects, TEE_CloseObject is equivalent to TEE_Free↔TransientObject.

Parameters

<i>object</i>	Handle of the object.
---------------	-----------------------

Returns

TEE_SUCCESS if success else error occurred.

10.30.1.8 TEE_CreatePersistentObject() `TEE_Result TEE_CreatePersistentObject (`
`uint32_t storageID,`
`const void * objectID,`
`uint32_t objectIDLen,`
`uint32_t flags,`
`TEE_ObjectHandle attributes,`
`const void * initialData,`
`uint32_t initialDataLen,`
`TEE_ObjectHandle * object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_CreatePersistentObject\(\)](#) - Creates a persistent object with initial attributes.

In this function an initial data stream content returns either a handle on the created object or TEE_HANDLE_NULL upon failure.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>attributes</i>	A handle on a persistent object or an initialized transient object from which to take the persistent object attributes
<i>initialData</i>	The initial data content of the persistent object
<i>initialDataLen</i>	The initial data content of the persistent object
<i>object</i>	A pointer to the handle which contains the opened handle upon successful completion

Returns

0 if success else error occurred.

10.30.1.9 TEE.Free() `void TEEFree (`
`void * buffer)`

[TEE.Free\(\)](#) - causes the space pointed to by *buffer* to be deallocated; that is made available for further allocation.

This function describes if *buffer* is a NULL pointer, `TEE.Free` does nothing. Otherwise, it is a Programmer Error if the argument does not match a pointer previously returned by the `TEE.Malloc` or `TEE.Realloc` if the space has been deallocated by a call to `TEE.Free` or `TEE.Realloc`.

Parameters

<i>buffer</i>	The pointer to the memory block to be freed.
---------------	--

10.30.1.10 TEE.GenerateRandom() `void TEEGenerateRandom (`
`void * randomBuffer,`
`uint32_t randomBufferLen)`

Crypto, common.

[TEE.GenerateRandom\(\)](#) - Generates random data.

This function generates random data of random buffer length and is stored in to random Buffer by calling `wc_RNG↵_GenerateBlock()`. If `ret` is not equal to 0 then `TEE.Panic` is called.

Parameters

<i>randomBuffer</i>	Reference to generated random data
<i>randomBufferLen</i>	Byte length of requested random data

Returns

random data random data will be returned.

10.30.1.11 TEE_GetObjectInfo1() `TEE_Result TEE_GetObjectInfo1 (`
 `TEE_ObjectHandle object,`
 `TEE_ObjectInfo * objectInfo)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_GetObjectInfo1\(\)](#) - Returns the characteristics of an object.

This function returns a handle which can be used to access the object's attributes and data stream.

Parameters

<i>objectInfo</i>	Pointer to a structure filled with the object information
<i>object</i>	Handle of the object

Returns

0 if success else error occurred.

10.30.1.12 TEE_GetREETime() `void TEE_GetREETime (`
 `TEE_Time * time)`

Core Functions, Time Functions.

[TEE_GetREETime\(\)](#) - Retrieves the current REE system time.

This function retrieves the current time as seen from the point of view of the REE.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds
-------------	--

10.30.1.13 TEE_GetSystemTime() `void TEE_GetSystemTime (`
`TEE_Time * time)`

Core Functions, Time Functions.

[TEE_GetSystemTime\(\)](#) - Retrieves the current system time.

This function describes the system time has an arbitrary implementation defined origin that can vary across TA instances. The minimum guarantee is that the system time shall be monotonic for a given TA instance.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds
-------------	--

10.30.1.14 TEE_Malloc() `void * TEE_Malloc (`
`uint32_t size,`
`uint32_t hint)`

[TEE_Malloc\(\)](#) - Allocates space for an object whose size in bytes is specified in the parameter size.

This function describes the pointer returned is guaranteed to be aligned such that it may be assigned as a pointer to any basic C type. The valid hint values are a bitmask and can be independently set. This parameter allows Trusted Applications to refer to various pools of memory or to request special characteristics for the allocated memory by using an implementation-defined hint. Future versions of this specification may introduce additional standard hints.

Parameters

<i>size</i>	The size of the buffer to be allocated.
<i>hint</i>	A hint to the allocator.

Returns

Upon successful completion, with size not equal to zero, the function returns a pointer to the allocated space.

10.30.1.15 TEE_OpenPersistentObject() `TEE_Result TEE_OpenPersistentObject (`
`uint32_t storageID,`
`const void * objectID,`
`uint32_t objectIDLen,`
`uint32_t flags,`
`TEE_ObjectHandle * object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_OpenPersistentObject\(\)](#) - Opens a handle on an existing persistent object.

This function returns a handle which can be used to access the object's attributes and data stream.

Parameters

<i>storageID</i>	The storage to use
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success else error occurred.

10.30.1.16 TEE_ReadObjectData() `TEE_Result TEE_ReadObjectData (`
`TEE_ObjectHandle object,`
`void * buffer,`
`uint32_t size,`
`uint32_t * count)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_ReadObjectData\(\)](#) - Attempts to read size bytes from the data stream associated with the object into the buffer pointed to by buffer.

The bytes are read starting at the position in the data stream currently stored in the object handle. The handle's position is incremented by the number of bytes actually read. On completion of `TEE_ReadObjectData` sets the number of bytes actually read in the "uint32_t" pointed to by count. The value written to *count may be less than size if the number of bytes until the end-of-stream is less than size. It is set to 0 if the position at the start of the read operation is at or beyond the end-of-stream. These are the only cases where *count may be less than size.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write
<i>count</i>	size of the buffer.

Returns

TEE_SUCCESS if success else error occurred.

10.30.1.17 TEE_Realloc() `void * TEE_Realloc (`
`void * buffer,`
`uint32_t newSize)`

[TEE_Realloc\(\)](#) - Changes the size of the memory object pointed to by *buffer* to the size specified by *new size*.

This function describes the content of the object remains unchanged up to the lesser of the new and old sizes. Space in excess of the old size contains unspecified content. If the new size of the memory object requires movement of the object, the space for the previous instantiation of the object is deallocated. If the space cannot be allocated, the original object remains allocated, and this function returns a NULL pointer.

Parameters

<i>buffer</i>	The pointer to the object to be reallocated.
<i>newSize</i>	The new size required for the object

Returns

Upon successful completion, `TEE_Realloc` returns a pointer to the (possibly moved) allocated space. If there is not enough available memory, `TEE_Realloc` returns a NULL pointer and the original buffer is still allocated and unchanged.

10.30.1.18 TEE_WriteObjectData() `TEE_Result TEE_WriteObjectData (`
`TEE_ObjectHandle object,`
`const void * buffer,`
`uint32_t size)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_WriteObjectData\(\)](#) - Writes the buffer data in to persistent objects.

In this function it checks if object is present or not, the encryption/ decryption buffer is taken by calling `mbedtls.aes->.crypt_cbc()` then that buffer data is encrypted and mapped to object. On the base of object creation `TEE_SUCCESS` appears else `TEE_ERROR.GENERIC` appears.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write

Returns

`TEE_SUCCESS` if success else error occurred.

10.30.1.19 wc_ocall_genseed() `int wc_ocall_genseed (`
 `void * nonce,`
 `uint32_t len)`

[wc_ocall_genseed\(\)](#) To generate random data.

This function describes the return value of random generated data. if generated random value is not equal to length of buffer then panic reason occurs.

Parameters

<i>nonce</i>	pointer of buffer
<i>len</i>	length of the buffer.

Returns

0 on success else error will occur based on panic raised inside trusted application.

10.30.2 Variable Documentation

10.30.2.1 rngstr `WC_RNG rngstr [static]`

10.30.2.2 wc_rng_init `int wc_rng_init = 0 [static]`

`ocall_getrandom()` - For getting random data.

This function describes that the retval is returned based on the size of buffer by calling the functions `ocall_getrandom196` and `ocall_getrandom16`

Parameters

<i>buf</i>	character type buffer
<i>len</i>	size of the buffer
<i>flags</i>	unassigned integer flag

Returns

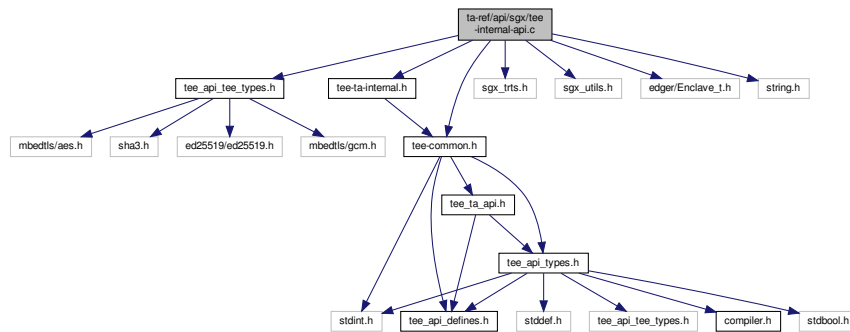

retval value will be returned based on length of buffer.

10.31.1 Function Documentation

10.31.1.1 `__attribute__((noret)) void __attribute__((noret))` (

TEE_Panic() - Raises a Panic in the Trusted Application instance

When a Trusted Application calls the TEE_Panic function, the current instance shall be destroyed and all the resources opened by the instance shall be reclaimed.

Parameters

<code>ec</code>	An informative panic code defined by the TA. May be displayed in traces if traces are available.
-----------------	--

10.31.1.2 `flags2flags() static int flags2flags (`
`int flags) [inline], [static]`

`flags2flags()` - Checks the status for reading or writing of the file operational.

This function is to check the status for reading or writing of the file operational.

Parameters

<code>flags</code>	Flags of the referencing node.
--------------------	--------------------------------

Returns

0 if success else error occurred.

10.31.1.3 `get_wc_rng() static WC_RNG * get_wc_rng (`
`void) [static]`

`get_wc_rng()` - Gets the seed (from OS) and key cipher for rng(random number genertor).

This function returns the random number or unique number of "rngstr".

Returns

random number if success else error occurred.

10.31.1.4 GetRelTimeEnd() `TEE_Result GetRelTimeEnd (`
`uint64_t end)`

Core Functions, Time Functions.

[GetRelTimeStart\(\)](#) - find the real time of the end timing.

This function prints the End timing.

Parameters

<i>end</i>	End timing
------------	------------

Returns

0 if success else error occurred

10.31.1.5 GetRelTimeStart() `TEE_Result GetRelTimeStart (`
`uint64_t start)`

Core Functions, Time Functions.

[GetRelTimeStart\(\)](#) - Gets the real time of the start timing.

This function prints the start timing.

Parameters

<i>start</i>	start timing
--------------	--------------

Returns

0 if success else error occurred.

10.31.1.6 OpenPersistentObject() `static TEE_Result OpenPersistentObject (`
`uint32_t storageID,`
`const void * objectID,`

```

uint32_t objectIDLen,
uint32_t flags,
TEE_ObjectHandle * object,
int ocreat ) [static]

```

OpenPersistentObject() - Opens a handle on an existing persistent object.

The flags parameter is a set of flags that controls the access rights and sharing permissions with which the object handle is opened. The value of the flags parameter is constructed by a bitwise-inclusive OR of flags TEE_DATA_FLAG_ACCESS_READ, the object is opened with the read access right. This allows the Trusted Application to call the function TEE_ReadObjectData. TEE_DATA_FLAG_ACCESS_WRITE, the object is opened with the write access right. TEE_DATA_FLAG_ACCESS_WRITE_META, the object is opened with the write-meta access right.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	length of the identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion.

Returns

0 if success else error occurred.

10.31.1.7 set_object_key() static int set_object_key (
const void * id,
unsigned int idlen,
TEE_ObjectHandle object) [static]

set_object_key - To initialize report and then attest enclave with file.

This function describes objectID as key_id to make the key dependent on it sgx report key is 128-bit. Fill another 128-bit with seal key. seal key doesn't change with enclave. Better than nothing, though. random nonce can not use for AES here because of persistency. the digest of attestation report and objectID as the last resort has been used.

Parameters

<i>id</i>	id of the object.
<i>idlen</i>	length of the id.
<i>object</i>	TEE_ObjectHandle type handle.

Returns

0 if success else error occurred.

10.31.1.8 TEE_CloseObject() `void TEE_CloseObject (`
`TEE_ObjectHandle object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_CloseObject\(\)](#) - Function closes an opened object handle.

The object can be persistent or transient. For transient objects, TEE_CloseObject is equivalent to TEE_Free↔TransientObject.

Parameters

<i>object</i>	Handle of the object
---------------	----------------------

Returns

TEE_SUCCESS if success else error occurred.

10.31.1.9 TEE_CreatePersistentObject() `TEE_Result TEE_CreatePersistentObject (`
`uint32_t storageID,`
`const void * objectID,`
`uint32_t objectIDLen,`
`uint32_t flags,`
`TEE_ObjectHandle attributes,`
`const void * initialData,`
`uint32_t initialDataLen,`
`TEE_ObjectHandle * object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_CreatePersistentObject\(\)](#) - Creates a persistent object with initial attributes.

An initial data stream content, and optionally returns either a handle on the created object, or TEE_HANDLE_NULL upon failure.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>attributes</i>	A handle on a persistent object or an initialized transient object from which to take the persistent object attributes
<i>initialData</i>	The initial data content of the persistent object
<i>initialDataLen</i>	The initial data content of the persistent object
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success, else error occurred.

10.31.1.10 TEE_GenerateRandom() `void TEE_GenerateRandom (`
`void * randomBuffer,`
`uint32_t randomBufferLen)`

Crypto, common.

[TEE_GenerateRandom\(\)](#) - Generates random data.

This function generates random data of random bufferlength and is stored in to randomBuffer by calling `sgx_read_rand()`.

Parameters

<i>randomBuffer</i>	Reference to generated random data
<i>randomBufferLen</i>	Byte length of requested random data

10.31.1.11 TEE_GetObjectInfo1() `TEE_Result TEE_GetObjectInfo1 (`
`TEE_ObjectHandle object,`
`TEE_ObjectInfo * objectInfo)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_GetObjectInfo1\(\)](#) - Function returns the characteristics of an object.

It returns a handle that can be used to access the object's attributes and data stream.

Parameters

<i>objectInfo</i>	Pointer to a structure filled with the object information
<i>object</i>	Handle of the object

Returns

0 if success else error occurred.

10.31.1.12 TEE_GetREETime() `void TEE_GetREETime (`
`TEE_Time * time)`

Core Functions, Time Functions.

[TEE_GetREETime\(\)](#) - Function retrieves the current REE system time.

This function retrieves the current time as seen from the point of view of the REE.

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds.
-------------	---

10.31.1.13 TEE_GetSystemTime() `void TEE_GetSystemTime (TEE_Time * time)`

Core Functions, Time Functions.

[TEE_GetSystemTime\(\)](#) - Retrieves the current system time.

The system time has an arbitrary implementation-defined origin that can vary across TA instances

Parameters

<i>time</i>	Filled with the number of seconds and milliseconds.
-------------	---

10.31.1.14 TEE_OpenPersistentObject() `TEE_Result TEE_OpenPersistentObject (uint32_t storageID, const void * objectID, uint32_t objectIDLen, uint32_t flags, TEE_ObjectHandle * object)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_OpenPersistentObject\(\)](#) - Opens a handle on an existing persistent object.

This function returns a handle that can be used to access the object's attributes and data stream.

Parameters

<i>storageID</i>	The storage to use.
<i>objectID</i>	The object identifier
<i>objectIDLen</i>	The object identifier
<i>flags</i>	The flags which determine the settings under which the object is opened.
<i>object</i>	A pointer to the handle, which contains the opened handle upon successful completion

Returns

0 if success, else error occurred.

10.31.1.15 TEE_ReadObjectData() `TEE_Result TEE_ReadObjectData (`
 `TEE_ObjectHandle object,`
 `void * buffer,`
 `uint32_t size,`
 `uint32_t * count)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_ReadObjectData\(\)](#) - Attempts to read size bytes from the data stream associated with the object object into the buffer pointed to by buffer.

The bytes are read starting at the position in the data stream currently stored in the object handle. The handle's position is incremented by the number of bytes actually read. On completion TEE_ReadObjectData sets the number of bytes actually read in the uint32_t pointed to by count. The value written to *count may be less than size if the number of bytes until the end-of-stream is less than size. It is set to 0 if the position at the start of the read operation is at or beyond the end-of-stream. These are the only cases where *count may be less than size.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write
<i>count</i>	size of the buffer.

Returns

TEE_SUCCESS if success, else error occurred.

10.31.1.16 TEE_WriteObjectData() `TEE_Result TEE_WriteObjectData (`
 `TEE_ObjectHandle object,`
 `const void * buffer,`
 `uint32_t size)`

Core Functions, Secure Storage Functions (data is isolated for each TA)

[TEE_WriteObjectData\(\)](#) - writes size bytes from the buffer pointed to by buffer to the data stream associated with the open object handle object.

If the current data position points before the end-of-stream, then size bytes are written to the data stream, overwriting bytes starting at the current data position. If the current data position points beyond the stream's end, then the data stream is first extended with zero bytes until the length indicated by the data position indicator is reached, and then size bytes are written to the stream.

Parameters

<i>object</i>	Handle of the object
<i>buffer</i>	The buffer containing the data to be written
<i>size</i>	The number of bytes to write

Returns

TEE_SUCCESS if success else error occurred.

10.38.1 Function Documentation

10.38.1.1 TEEC_AllocateSharedMemory() [TEEC_Result](#) [TEEC_AllocateSharedMemory](#) (
[TEEC_Context](#) * context,
[TEEC_SharedMemory](#) * sharedMem)

[TEEC_AllocateSharedMemory\(\)](#) - Allocate shared memory for TEE.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>sharedMem</i>	Pointer to the allocated shared memory.

Returns

TEEC_SUCCESS The registration was successful.
 TEEC_ERROR_OUT_OF_MEMORY Memory exhaustion.
 TEEC_Result Something failed.

10.38.1.2 TEEC.CloseSession() `void TEEC.CloseSession (`
 `TEEC_Session * session)`

[TEEC.CloseSession\(\)](#) - Closes the session which has been opened with the specific trusted application.

Parameters

<i>session</i>	The opened session to close.
----------------	------------------------------

10.38.1.3 TEEC.FinalizeContext() `void TEEC.FinalizeContext (`
 `TEEC_Context * context)`

[TEEC.FinalizeContext\(\)](#) - Destroys a context holding connection information on the specific TEE.

This function finalizes an initialized TEE context, closing the connection between the client application and the TEE. This function must only be called when all sessions related to this TEE context have been closed and all shared memory blocks have been released.

Parameters

<i>context</i>	The context to be finalized.
----------------	------------------------------

10.38.1.4 TEEC.InitializeContext() `TEEC_Result TEEC.InitializeContext (`
 `const char * name,`
 `TEEC_Context * context)`

[TEEC.InitializeContext\(\)](#) - Initializes a context holding connection information on the specific TEE, designated by the name string.

Parameters

<i>name</i>	A zero-terminated string identifying the TEE to connect to. If name is set to NULL, the default TEE is connected to. NULL is the only supported value in this version of the API implementation.
<i>context</i>	The context structure which is to be initialized.

Returns

TEEC_SUCCESS The initialization was successful.

TEEC_Result Something failed.

10.38.1.5 TEEC.OpenSession() `TEEC_Result TEEC.OpenSession (`
`TEEC_Context * context,`
`TEEC_Session * session,`
`const TEEC_UUID * destination,`
`uint32_t connectionMethod,`
`const void * connectionData,`
`TEEC_Operation * operation,`
`uint32_t * returnOrigin)`

[TEEC.OpenSession\(\)](#) - Opens a new session with the specified trusted application.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>session</i>	The session to initialize.
<i>destination</i>	A structure identifying the trusted application with which to open a session.
<i>connectionMethod</i>	The connection method to use.
<i>connectionData</i>	Any data necessary to connect with the chosen connection method. Not supported, should be set to NULL.
<i>operation</i>	An operation structure to use in the session. May be set to NULL to signify no operation structure needed.
<i>returnOrigin</i>	A parameter which will hold the error origin if this function returns any value other than TEEC_SUCCESS.

Returns

TEEC_SUCCESS OpenSession successfully opened a new session.

TEEC_Result Something failed.

10.38.1.6 TEEC.RegisterSharedMemory() `TEEC_Result TEEC.RegisterSharedMemory (`
`TEEC_Context * context,`
`TEEC_SharedMemory * sharedMem)`

[TEEC.RegisterSharedMemory\(\)](#) - Register a block of existing memory as a shared block within the scope of the specified context.

Parameters

<i>context</i>	The initialized TEE context structure in which scope to open the session.
<i>sharedMem</i>	pointer to the shared memory structure to register.

Returns

TEEC_SUCCESS The registration was successful.
 TEEC_ERROR_OUT_OF_MEMORY Memory exhaustion.
 TEEC_Result Something failed.

10.38.1.7 TEEC.ReleaseSharedMemory() `void TEEC_ReleaseSharedMemory (TEEC_SharedMemory * sharedMemory)`

[TEEC.ReleaseSharedMemory\(\)](#) - Free or deregister the shared memory.

Parameters

<i>sharedMem</i>	Pointer to the shared memory to be freed.
------------------	---

10.38.1.8 TEEC.RequestCancellation() `void TEEC_RequestCancellation (TEEC_Operation * operation)`

[TEEC.RequestCancellation\(\)](#) - Request the cancellation of a pending open session or command invocation.

Parameters

<i>operation</i>	Pointer to an operation previously passed to open session or invoke.
------------------	--

- void [trace_vprintf](#) (const char *func, int line, int level, bool level_ok, const char *fmt, va_list ap)
- void [trace_printf](#) (const char *func, int line, int level, bool level_ok, const char *fmt,...)

10.39.1 Function Documentation

10.39.1.1 [trace_printf\(\)](#) void trace_printf (

```

    const char * func,
    int line,
    int level,
    bool level_ok,
    const char * fmt,
    ... )

```

[trace_printf\(\)](#) - Prints the formatted data to stdout.

This function returns the value of ap by calling va_end().

Parameters

<i>func</i>	Pointer to a buffer where the resulting C-string is stored.
<i>line</i>	integer type of line
<i>level_ok</i>	boolean value
<i>fmt</i>	C string that contains a format string
<i>ap</i>	A value identifying a variable arguments list

Returns

Total number of characters is returned.

10.39.1.2 trace_vprintf() void trace_vprintf (

```

    const char * func,
    int line,
    int level,
    bool level_ok,
    const char * fmt,
    va_list ap )

```

[trace_vprintf\(\)](#) - Writes the formatted data from variable argument list to sized buffer.

This function returns the buffer character by calling ocall_print_string()

Parameters

<i>func</i>	Pointer to a buffer where the resulting C-string is stored.
<i>line</i>	integer type of line
<i>level_ok</i>	boolean value
<i>fmt</i>	C string that contains a format string
<i>ap</i>	A value identifying a variable arguments list

Returns

buf The total number of characters written is returned.

10.40.1 Function Documentation

10.40.1.1 TEE_AEDecryptFinal() **TEE_Result** TEE_AEDecryptFinal (
TEE_OperationHandle operation,
const void * srcData,
uint32_t srcLen,
void * destData,
uint32_t * destLen,
void * tag,
uint32_t tagLen)

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

TEE_AEDecryptFinal() - Processes data that has not been processed by previous calls to **TEE_AEUpdate** as well as data supplied in **srcData**.

This function completes the AE operation and compares the computed tag with the tag supplied in the parameter **tag**. The operation handle can be reused or newly initialized. The buffers **srcData** and **destData** shall be either completely disjoint or equal in their starting positions. The operation may be in either initial or active state and enters initial state afterwards.

Parameters

<i>operation</i>	Handle of a running AE operation
<i>srcData</i>	Reference to final chunk of input data to be encrypted
<i>srcLen</i>	length of the input data
<i>destData</i>	Output buffer. Can be omitted if the output is to be discarded.
<i>destLen</i>	length of the buffer.
<i>tag</i>	Output buffer filled with the computed tag
<i>tagLen</i>	length of the tag.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER If the output buffer is not large enough to contain the output

TEE_ERROR_MAC_INVALID If the computed tag does not match the supplied tag

10.40.1.2 TEE_AEEncryptFinal() `TEE_Result TEE_AEEncryptFinal (`
`TEE_OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen,`
`void * tag,`
`uint32_t * tagLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

TEE_AEEncryptFinal() - processes data that has not been processed by previous calls to TEE_AEUpdate as well as data supplied in srcData .

TEE_AEEncryptFinal completes the AE operation and computes the tag. The operation handle can be reused or newly initialized. The buffers srcData and destData SHALL be either completely disjoint or equal in their starting positions. The operation may be in either initial or active state and enters initial state afterwards.

Parameters

<i>operation</i>	Handle of a running AE operation
<i>srcData</i>	Reference to final chunk of input data to be encrypted
<i>srcLen</i>	length of the input data
<i>destData</i>	Output buffer. Can be omitted if the output is to be discarded.
<i>destLen</i>	length of the buffer.
<i>tag</i>	Output buffer filled with the computed tag
<i>tagLen</i>	length of the tag.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER If the output or tag buffer is not large enough to contain the output.

10.40.1.3 TEE_AEInit() `TEE_Result TEE_AEInit (`
`TEE_OperationHandle operation,`
`const void * nonce,`
`uint32_t nonceLen,`
`uint32_t tagLen,`
`uint32_t AADLen,`
`uint32_t payloadLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE_AEInit\(\)](#) - Initializes an Authentication Encryption operation.

The operation must be in initial state and remains in the initial state afterwards.

Parameters

<i>operation</i>	A handle on the operation.
<i>nonce</i>	The operation nonce or IV
<i>nonceLen</i>	length of nonce
<i>tagLen</i>	Size in bits of the tag
<i>AADLen</i>	Length in bytes of the AAD
<i>payloadLen</i>	Length in bytes of the payload.

Returns

0 on success.

TEE_ERROR_NOT_SUPPORTED If the tag length is not supported by the algorithm.

10.40.1.4 TEE_AEUpdate() `TEE_Result TEE_AEUpdate (`
`TEE_OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE_AEUpdate\(\)](#) - Accumulates data for an Authentication Encryption operation

This function describes Input data does not have to be a multiple of block size. Subsequent calls to this function are possible. Unless one or more calls of this function have supplied sufficient input data, no output is generated. when using this routine to decrypt the returned data may be corrupt since the integrity check is not performed until all the data has been processed. If this is a concern then only use the [TEE_AEDecryptFinal](#) routine.

Parameters

<i>operation</i>	Handle of a running AE operation.
<i>srcData</i>	Input data buffer to be encrypted or decrypted
<i>srcLen</i>	length of the input buffer.
<i>destData</i>	Output buffer
<i>destLen</i>	length of the out put buffer.

Returns

0 on success.

TEE_ERROR_SHORT_BUFFER if the output buffer is not large enough to contain the output.

10.40.1.5 TEE.AEUpdateAAD() `void TEE_AEUpdateAAD (`
`TEE_OperationHandle operation,`
`const void * AADdata,`
`uint32_t AADdataLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE.AEUpdateAAD\(\)](#) - Feeds a new chunk of Additional Authentication Data (AAD) to the AE operation. Subsequent calls to this function are possible.

The TEE.AEUpdateAAD function feeds a new chunk of Additional Authentication Data (AAD) to the AE operation. Subsequent calls to this function are possible. The buffers srcData and destData shall be either completely disjoint or equal in their starting positions. The operation SHALL be in initial state and remains in initial state afterwards.

Parameters

<i>operation</i>	Handle on the AE operation
<i>AADdata</i>	Input buffer containing the chunk of AAD
<i>AADdataLen</i>	length of the chunk of AAD.

10.40.1.6 TEE.AllocateOperation() `TEE_Result TEE_AllocateOperation (`
`TEE_OperationHandle * operation,`
`uint32_t algorithm,`
`uint32_t mode,`
`uint32_t maxKeySize)`

Crypto, for all Crypto Functions.

[TEE.AllocateOperation\(\)](#) - Allocates a handle for a new cryptographic operation and sets the mode and algorithm type.

If this function does not return with TEE.SUCCESS then there is no valid handle value. Once a cryptographic operation has been created, the implementation shall guarantee that all resources necessary for the operation are allocated and that any operation with a key of at most maxKeySize bits can be performed. For algorithms that take multiple keys, for example the AES XTS algorithm, the maxKeySize parameter specifies the size of the largest key. It is up to the implementation to properly allocate space for multiple keys if the algorithm so requires.

Parameters

<i>operation</i>	reference to generated operation handle.
<i>algorithm</i>	One of the cipher algorithms.
<i>mode</i>	The operation mode.
<i>maxKeySize</i>	Maximum key size in bits for the operation.

Returns

0 in case of success

TEE_ERROR_OUT_OF_MEMORY If there are not enough resources to allocate the operation.

TEE_ERROR_NOT_SUPPORTED If the mode is not compatible with the algorithm or key size or if the algorithm is not one of the listed algorithms or if maxKeySize is not appropriate for the algorithm.

10.40.1.7 TEE_AllocateTransientObject() `TEE_Result TEE_AllocateTransientObject (`
`TEE_ObjectType objectType,`
`uint32_t maxKeySize,`
`TEE_ObjectHandle * object)`

Crypto, Asymmetric key Verification Functions.

[TEE_AllocateTransientObject\(\)](#) - Allocates an uninitialized transient object. Transient objects are used to hold a cryptographic object (key or key-pair).

The value TEE_KEYSIZE_NO_KEY should be used for maxObjectSize for object types that do not require a key so that all the container resources can be pre-allocated. As allocated, the container is uninitialized. It can be initialized by subsequently importing the object material, generating an object, deriving an object, or loading an object from the Trusted Storage.

Parameters

<i>objectType</i>	Type of uninitialized object container to be created
<i>maxKeySize</i>	Key Size of the object.
<i>object</i>	Filled with a handle on the newly created key container.

Returns

0 on success

TEE_ERROR_OUT_OF_MEMORY If not enough resources are available to allocate the object handle.

TEE_ERROR_NOT_SUPPORTED If the key size is not supported or the object type is not supported.

10.40.1.8 TEE_AsymmetricSignDigest() `TEE_Result TEE_AsymmetricSignDigest (`
`TEE_OperationHandle operation,`
`const TEE_Attribute * params,`
`uint32_t paramCount,`
`const void * digest,`
`uint32_t digestLen,`
`void * signature,`
`uint32_t * signatureLen)`

Crypto, Asymmetric key Verification Functions.

[TEE_AsymmetricSignDigest\(\)](#) - Signs a message digest within an asymmetric operation.

Parameters

<i>operation</i>	Handle on the operation, which SHALL have been suitably set up with an operation key.
<i>params</i>	Optional operation parameters
<i>paramCount</i>	size of param
<i>digest</i>	Input buffer containing the input message digest
<i>digestLen</i>	length of input buffer.
<i>signature</i>	Output buffer written with the signature of the digest
<i>signatureLen</i>	length of output buffer.

Returns

0 on success

TEE_ERROR_SHORT_BUFFER If the signature buffer is not large enough to hold the result

10.40.1.9 TEE_AsymmetricVerifyDigest() `TEE_Result` TEE_AsymmetricVerifyDigest (
 `TEE_OperationHandle` operation,
 const `TEE_Attribute` * params,
 uint32_t paramCount,
 const void * digest,
 uint32_t digestLen,
 const void * signature,
 uint32_t signatureLen)

Crypto, Asymmetric key Verification Functions.

[TEE_AsymmetricVerifyDigest\(\)](#) - verifies a message digest signature within an asymmetric operation.

This function describes the message digest signature verify by calling ed25519_verify().

Parameters

<i>operation</i>	Handle on the operation, which SHALL have been suitably set up with an operation key.
<i>params</i>	Optional operation parameters
<i>paramCount</i>	size of param.
<i>digest</i>	Input buffer containing the input message digest
<i>digestLen</i>	length of input buffer.
<i>signature</i>	Output buffer written with the signature of the digest
<i>signatureLen</i>	length of output buffer.

Returns

TEE_SUCCESS on success

TEE_ERROR_SIGNATURE_INVALID if the signature is invalid.

10.40.1.10 TEE_CipherDoFinal() `TEE_Result TEE_CipherDoFinal (`
`TEE_OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen)`

[TEE_CipherDoFinal\(\)](#) - Finalizes the cipher operation, processing data that has not been processed by previous calls to [TEE_CipherUpdate](#) as well as data supplied in `srcData` .

This function describes The operation handle can be reused or re-initialized. The buffers `srcData` and `destData` shall be either completely disjoint or equal in their starting positions. The operation SHALL be in active state and is set to initial state afterwards.

Parameters

<i>operation</i>	Handle of a running Cipher operation
<i>srcData</i>	Input data buffer to be encrypted or decrypted
<i>srcLen</i>	length of input buffer
<i>destData</i>	output buffer
<i>destLen</i>	ouput buffer length.

Returns

0 on success

TEE_ERROR_SHORT_BUFFER If the output buffer is not large enough to contain the output

10.40.1.11 TEE_CipherInit() `void TEE_CipherInit (`
`TEE_OperationHandle operation,`
`const void * nonce,`
`uint32_t nonceLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE_CipherInit\(\)](#) - starts the symmetric cipher operation.

The operation shall have been associated with a key. If the operation is in active state, it is reset and then initialized. If the operation is in initial state, it is moved to active state.

Parameters

<i>operation</i>	A handle on an opened cipher operation setup with a key
<i>nonce</i>	Buffer containing the operation Initialization Vector as appropriate.
<i>nonceLen</i>	length of the buffer

10.40.1.12 TEE_CipherUpdate() `TEE_Result TEE_CipherUpdate (`
`TEE.OperationHandle operation,`
`const void * srcData,`
`uint32_t srcLen,`
`void * destData,`
`uint32_t * destLen)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE_CipherUpdate\(\)](#) - encrypts or decrypts input data.

Input data does not have to be a multiple of block size. Subsequent calls to this function are possible. Unless one or more calls of this function have supplied sufficient input data, no output is generated. The cipher operation is finalized with a call to `TEE_CipherDoFinal`. The buffers `srcData` and `destData` SHALL be either completely disjoint or equal in their starting positions. The operation SHALL be in active state.

Parameters

<i>operation</i>	Handle of a running Cipher operation
<i>srcData</i>	Input data buffer to be encrypted or decrypted
<i>srcLen</i>	length of input buffer
<i>destData</i>	output buffer
<i>destLen</i>	output buffer length.

Returns

0 on success else

`TEE_ERROR_SHORT_BUFFER` If the output buffer is not large enough to contain the output. In this case, the input is not fed into the algorithm.

10.40.1.13 TEE_DigestDoFinal() `TEE_Result TEE_DigestDoFinal (`
`TEE.OperationHandle operation,`
`const void * chunk,`
`uint32_t chunkLen,`
`void * hash,`
`uint32_t * hashLen)`

[TEE_DigestDoFinal\(\)](#) - Finalizes the message digest operation and produces the message hash.

This function finalizes the message digest operation and produces the message hash. Afterwards the Message Digest operation is reset to initial state and can be reused.

Parameters

<i>operation</i>	Handle of a running Message Digest operation.
<i>chunk</i>	Chunk of data to be hashed.
<i>chunkLen</i>	size of the chunk.
<i>hash</i>	Output buffer filled with the message hash.
<i>hashLen</i>	length of the message hash.

Returns

0 on success

TEE_ERROR_SHORT_BUFFER If the output buffer is too small. In this case, the operation is not finalized.

10.40.1.14 TEE_DigestUpdate() void TEE_DigestUpdate (
 TEE_OperationHandle operation,
 const void * chunk,
 uint32_t chunkSize)

Crypto, Message Digest Functions.

[TEE_DigestUpdate\(\)](#) - Accumulates message data for hashing.

This function describes the message does not have to be block aligned. Subsequent calls to this function are possible. The operation may be in either initial or active state and becomes active.

Parameters

<i>operation</i>	Handle of a running Message Digest operation.
<i>chunk</i>	Chunk of data to be hashed
<i>chunkSize</i>	size of the chunk.

10.40.1.15 TEE_FreeOperation() void TEE_FreeOperation (
 TEE_OperationHandle operation)

Crypto, for all Crypto Functions.

[TEE_FreeOperation\(\)](#) - Deallocates all resources associated with an operation handle.

This function deallocates all resources associated with an operation handle. After this function is called, the operation handle is no longer valid. All cryptographic material in the operation is destroyed. The function does nothing if operation is TEE_HANDLE_NULL.

Parameters

<i>operation</i>	Reference to operation handle.
------------------	--------------------------------

Returns

nothing after the operation free.

10.40.1.16 TEE_FreeTransientObject() `void TEE_FreeTransientObject (`
`TEE_ObjectHandle object)`

Crypto, Asymmetric key Verification Functions.

[TEE_FreeTransientObject\(\)](#) - Deallocates a transient object previously allocated with [TEE_AllocateTransientObject](#) .

this function describes the object handle is no longer valid and all resources associated with the transient object shall have been reclaimed after the [TEE_AllocateTransientObject\(\)](#) call.

Parameters

<i>object</i>	Handle on the object to free.
---------------	-------------------------------

10.40.1.17 TEE_GenerateKey() `TEE_Result TEE_GenerateKey (`
`TEE_ObjectHandle object,`
`uint32_t keySize,`
`const TEE_Attribute * params,`
`uint32_t paramCount)`

Crypto, Asymmetric key Verification Functions.

[TEE_GenerateKey \(\)](#) - Generates a random key or a key-pair and populates a transient key object with the generated key material.

The size of the desired key is passed in the *keySize* parameter and shall be less than or equal to the maximum key size specified when the transient object was created.

Parameters

<i>object</i>	Handle on an uninitialized transient key to populate with the generated key.
<i>keySize</i>	Requested key size shall be less than or equal to the maximum key size specified when the object container was created
<i>params</i>	Parameters for the key generation.
<i>paramCount</i>	The values of all parameters are copied into the object so that the params array and all the memory buffers it points to may be freed after this routine returns without affecting the object.

Returns

0 on succes

[TEE_ERROR_BAD_PARAMETERS](#) If an incorrect or inconsistent attribute is detected. The checks that are performed depend on the implementation.

10.40.1.18 TEE_InitRefAttribute() `void TEE_InitRefAttribute (`
`TEE_Attribute * attr,`

```
uint32_t attributeID,
const void * buffer,
uint32_t length )
```

Crypto, Asymmetric key Verification Functions.

[TEE_InitRefAttribute\(\)](#) - The helper function can be used to populate a single attribute either with a reference to a buffer or with integer values.

In `TEE_InitRefAttribute()` only the buffer pointer is copied, not the content of the buffer. This means that the attribute structure maintains a pointer back to the supplied buffer. It is the responsibility of the TA author to ensure that the contents of the buffer maintain their value until the attributes array is no longer in use.

Parameters

<i>attr</i>	attribute structure to initialize.
<i>attributeID</i>	Identifier of the attribute to populate.
<i>buffer</i>	input buffer that holds the content of the attribute.
<i>length</i>	buffer length.

10.40.1.19 TEE_InitValueAttribute() `void TEE_InitValueAttribute (`
`TEE_Attribute * attr,`
`uint32_t attributeID,`
`uint32_t a,`
`uint32_t b)`

Crypto, Asymmetric key Verification Functions.

[TEE_InitValueAttribute\(\)](#) - The helper function can be used to populate a single attribute either with a reference to a buffer or with integer values.

Parameters

<i>attr</i>	attribute structure to initialize.
<i>attributeID</i>	Identifier of the attribute to populate.
<i>a</i>	unsigned integer value to assign to the a member of the attribute structure.
<i>b</i>	unsigned integer value to assign to the b member of the attribute structure

10.40.1.20 TEE_SetOperationKey() `TEE_Result TEE_SetOperationKey (`
`TEE_OperationHandle operation,`
`TEE_ObjectHandle key)`

Crypto, Authenticated Encryption with Symmetric key Verification Functions.

[TEE_SetOperationKey\(\)](#) - Programs the key of an operation; that is, it associates an operation with a key.

The key material is copied from the key object handle into the operation. After the key has been set, there is no longer any link between the operation and the key object. The object handle can be closed or reset and this will not affect the operation. This copied material exists until the operation is freed using `TEE_FreeOperation` or another key is set into the operation.

Parameters

<i>operation</i>	Operation handle.
<i>key</i>	A handle on a key object.

Returns

0 on success return

`TEE_ERROR_CORRUPT_OBJECT` If the object is corrupt. The object handle is closed.

`TEE_ERROR_STORAGE_NOT_AVAILABLE` If the persistent object is stored in a storage area which is currently inaccessible.

10.40.1.21 `wolfSSL_Free()` `void wolfSSLFree (`
`void * p)`

[`wolfSSL_Free\(\)`](#) - Deallocates the memory which allocated previously.

Parameters

<i>p</i>	This is the pointer to a memory block.
----------	--

10.40.1.22 `wolfSSL_Malloc()` `void * wolfSSLMalloc (`
`size_t n)`

[`wolfSSL_Malloc\(\)`](#) - Allocates the requested memory and returns a pointer to it.

Parameters

<i>n</i>	size of the memory block.
